Contents

1 Linear Algebra **27**

1.1 L2 Norm . . . 27
1.2 Inner Product Spaces and Gradient Derivative . . . 29
1.2.1 Real inner product spaces . . . 30
1.2.2 Class instances . . . 35
1.2.3 Gradient derivative . . . 37
1.3 Cartesian Products as Vector Spaces . . . 39
1.3.1 Product is a Module . . . 39
1.3.2 Product is a Real Vector Space . . . 40
1.3.3 Product is a Metric Space . . . 41
1.3.4 Product is a Complete Metric Space . . . 51
1.3.5 Product is a Normed Vector Space . . . 52
1.3.6 Product is Finite Dimensional . . . 56
1.4 Finite-Dimensional Inner Product Spaces . . . 57
1.4.1 Interlude: Some properties of real sets . . . 57
1.4.2 Type class of Euclidean spaces . . . 58
1.4.3 Subclass relationships . . . 62
1.4.4 Class instances . . . 62
1.4.5 Locale instances . . . 65
1.5 Elementary Linear Algebra on Euclidean Spaces . . . 66
1.5.1 More interesting properties of the norm . . . 67
1.5.2 Substandard Basis . . . 68
1.5.3 Orthogonality . . . 69
1.5.4 Orthogonality of a transformation . . . 71
1.5.5 Bilinear functions . . . 72
1.5.6 Adjoints . . . 73
1.5.7 Euclidean Spaces as Typeclass . . . 74
1.5.8 Linearity and Bilinearity continued . . . 75
1.5.9 We continue . . . 78
1.5.10 Infinity norm . . . 83
1.5.11 Collinearity . . . 87
1.5.12 Properties of special hyperplanes . . . 89
1.5.13 Orthogonal bases and Gram-Schmidt process . . . 91

1.5.14 Decomposing a vector into parts in orthogonal subspaces 94
1.5.15 Linear functions are (uniformly) continuous on any set 100
1.5.16 Topological properties of linear functions 100
1.6 Affine Sets 101
1.6.1 Affine set and affine hull 102
1.6.2 Affine Dependence 113
1.6.3 Some Properties of Affine Dependent Sets 116
1.6.4 Affine Dimension of a Set 120
1.7 Convex Sets and Functions 129
1.7.1 Convex Sets 130
1.7.2 Explicit expressions for convexity in terms of arbitrary sums 133
1.7.3 Convex Functions on a Set 135
1.7.4 Arithmetic operations on sets preserve convexity 141
1.7.5 Convexity of real functions 150
1.7.6 Convexity of the generalised binomial 154
1.7.7 Some inequalities: Applications of convexity 154
1.7.8 Misc related lemmas 156
1.7.9 Cones 157
1.7.10 Connectedness of convex sets 159
1.7.11 Convex hull 160
1.7.12 Relations among closure notions and corresponding hulls 169
1.7.13 Caratheodory's theorem 170
1.7.14 Some Properties of subset of standard basis 173
1.7.15 Moving and scaling convex hulls 173
1.7.16 Convexity of cone hulls 173
1.8 Conic sets and conic hull 174
1.9 Convex cones and corresponding hulls 178
1.9.1 Radon's theorem 182
1.9.2 Helly's theorem 184
1.9.3 Epigraphs of convex functions 186
1.9.4 A bound within a convex hull 187
1.10 Definition of Finite Cartesian Product Type 188
1.10.1 Finite Cartesian products, with indexing and lambdas . 189
1.10.2 Cardinality of vectors 189
1.10.3 Group operations and class instances 191
1.10.4 Basic componentwise operations on vectors 193
1.10.5 Real vector space 194
1.10.6 Topological space 194
1.10.7 Metric space 197
1.10.8 Normed vector space 199
1.10.9 Inner product space 201
1.10.10 Euclidean space 201

1.10.11 A naive proof procedure to lift really trivial arithmetic stuff from the basis of the vector space 203
1.10.12 Some frequently useful arithmetic lemmas over vectors 205
1.10.13 Matrix operations 208
1.10.14 Inverse matrices (not necessarily square) 213
1.11 Linear Algebra on Finite Cartesian Products 214
1.11.1 Type ('a, 'n) *vec* and fields as vector spaces 215
1.11.2 Some interesting theorems and interpretations 222
1.11.3 Rank of a matrix 223
1.11.4 Lemmas for working on *real^1/2/3/4* 227
1.11.5 The collapse of the general concepts to dimension one . 228
1.11.6 Routine results connecting the types (*real*, *1*) *vec* and *real* 228
1.11.7 Explicit vector construction from lists 229
1.11.8 lambda skolemization on cartesian products 230
1.11.9 Explicit formulas for low dimensions 232
1.11.10 Orthogonality of a matrix 232
1.11.11 Finding an Orthogonal Matrix 234
1.11.12 Scaling and isometry 235
1.11.13 Induction on matrix row operations 237
1.12 Traces and Determinants of Square Matrices 242
1.12.1 Trace 242
1.12.2 Relation to invertibility 257
1.12.3 Cramer's rule 261
1.12.4 Rotation, reflection, rotoinversion 263
1.13 Operators involving abstract topology 266
1.13.1 General notion of a topology as a value 266
1.13.2 The discrete topology 270
1.13.3 Subspace topology 271
1.13.4 The canonical topology from the underlying type class 275
1.13.5 Basic "localization" results are handy for connectedness. 276
1.13.6 Derived set (set of limit points) 279
1.13.7 Closure with respect to a topological space 281
1.13.8 Frontier with respect to topological space 290
1.13.9 Locally finite collections 294
1.13.10 Continuous maps 297
1.13.11 Open and closed maps (not a priori assumed continuous) 305
1.13.12 Quotient maps 314
1.13.13 Separated Sets 322
1.13.14 Homeomorphisms 324
1.13.15 Relation of homeomorphism between topological spaces 333
1.13.16 Connected topological spaces 334
1.13.17 Compact sets 343
1.13.18 Embedding maps 351

1.13.19 Retraction and section maps . . . 353
1.13.20 Continuity . . . 355
1.13.21 Half-global and completely global cases . . . 356
1.13.22 The topology generated by some (open) subsets . . . 360
1.13.23 Topology bases and sub-bases . . . 361
1.13.24 Continuity via bases/subbases, hence upper and lower semicontinuity . . . 365
1.13.25 Pullback topology . . . 369
1.13.26 Proper maps (not a priori assumed continuous) . . . 371
1.13.27 Perfect maps (proper, continuous and surjective) . . . 376
1.14 F-Sigma and G-Delta sets in a Topological Space . . . 377
1.15 Disjoint sum of arbitarily many spaces . . . 382

2 Topology **387**

2.1 Elementary Topology . . . 387
2.1.1 Topological Basis . . . 388
2.1.2 Countable Basis . . . 390
2.1.3 Polish spaces . . . 399
2.1.4 Limit Points . . . 399
2.1.5 Interior of a Set . . . 404
2.1.6 Closure of a Set . . . 408
2.1.7 Frontier (also known as boundary) . . . 411
2.1.8 Filters and the “eventually true” quantifier . . . 412
2.1.9 Limits . . . 412
2.1.10 Compactness . . . 416
2.1.11 Cartesian products . . . 428
2.1.12 Continuity . . . 430
2.1.13 Homeomorphisms . . . 432
2.1.14 On Linorder Topologies . . . 436
2.1.15 nhdsin and atin . . . 438
2.1.16 Limits in a topological space . . . 440
2.1.17 Pointwise continuity in topological spaces . . . 443
2.1.18 Combining theorems for continuous functions into the reals . . . 444
2.2 Non-Denumerability of the Continuum . . . 446
2.2.1 Abstract . . . 446
2.3 Abstract Topology 2 . . . 450
2.3.1 Closure . . . 453
2.3.2 Frontier . . . 454
2.3.3 Compactness . . . 454
2.3.4 Continuity . . . 455
2.3.5 Equality of continuous functions on closure and related results . . . 456

2.3.6 A function constant on a set . . . 457
2.3.7 Continuity relative to a union. . . . 457
2.3.8 Inverse function property for open/closed maps . . . 458
2.3.9 Seperability . . . 460
2.3.10 Closed Maps . . . 461
2.3.11 Open Maps . . . 462
2.3.12 Quotient maps . . . 462
2.3.13 Pasting lemmas for functions, for of casewise definitions 464
2.3.14 Retractions . . . 469
2.3.15 Retractions on a topological space . . . 474
2.3.16 Paths and path-connectedness . . . 476
2.3.17 Connected components . . . 479
2.3.18 Combining theorems for continuous functions into the reals . . . 485
2.3.19 A few cardinality results . . . 486

3 Connected Components 493

3.0.1 Connectedness . . . 493
3.0.2 Connected components, considered as a connectedness relation or a set . . . 494
3.0.3 The set of connected components of a set . . . 499
3.0.4 Proving a function is constant on a connected set by proving that a level set is open . . . 502
3.0.5 Preservation of Connectedness . . . 502
3.0.6 Lemmas about components . . . 504
3.0.7 Constancy of a function from a connected set into a finite, disconnected or discrete set . . . 507
3.1 Function Topology . . . 508
3.1.1 The product topology . . . 509
3.1.2 The Alexander subbase theorem . . . 526
3.1.3 Open Pi-sets in the product topology . . . 534
3.1.4 Relationship with connected spaces, paths, etc. . . . 537
3.1.5 Projections from a function topology to a component . 542
3.1.6 Limits . . . 543
3.2 The binary product topology . . . 545
3.3 Product Topology . . . 545
3.3.1 Definition . . . 545
3.3.2 Continuity . . . 549
3.3.3 Homeomorphic maps . . . 556
3.4 T1 and Hausdorff spaces . . . 561
3.5 T1 spaces with equivalences to many naturally "nice" properties. 561
3.5.1 Hausdorff Spaces . . . 566
3.6 Lindelöf spaces . . . 578

4 Functional Analysis **585**

4.1 A decision procedure for metric spaces 585

5 Elementary Metric Spaces **589**

5.1 Open and closed balls 589
5.2 Limit Points 596
5.3 Perfect Metric Spaces 597
5.4 Finite and discrete 597
5.5 Interior 598
5.6 Frontier 598
5.7 Limits 599
5.8 Continuity 601
5.9 Closure and Limit Characterization 603
5.10 Boundedness 605
5.11 Compactness 607
5.12 Banach fixed point theorem 612
5.13 Edelstein fixed point theorem 614
5.14 The diameter of a set 615
5.15 Metric spaces with the Heine-Borel property 619
5.16 Completeness 623
5.17 Cauchy continuity 627
5.18 Finite intersection property 629
5.19 Properties of Balls and Spheres 630
5.20 Distance from a Set 631
5.21 Infimum Distance 631
5.22 Separation between Points and Sets 636
5.23 Uniform Continuity 637
5.24 Continuity on a Compact Domain Implies Uniform Continuity 639
5.25 Theorems relating continuity and uniform continuity to closures 641
5.26 With Abstract Topology (TODO: move and remove dependency?) 646
5.27 Closed Nest 647
5.28 Making a continuous function avoid some value in a neighbourhood 649
5.29 Consequences for Real Numbers 650
5.30 The infimum of the distance between two sets 652
5.31 Diameter Lemma 656
5.32 Elementary Normed Vector Spaces 658
5.32.1 Orthogonal Transformation of Balls 658
5.32.2 Various Lemmas Combining Imports 658
5.32.3 Support 660
5.32.4 Intervals 661
5.32.5 Limit Points 662
5.32.6 Balls and Spheres in Normed Spaces 664

5.32.7 Various Lemmas on Normed Algebras 667
5.32.8 Filters 668
5.32.9 Trivial Limits 668
5.32.10 Limits 668
5.32.11 Limit Point of Filter 671
5.32.12 Boundedness 671
5.32.13 Relations among convergence and absolute convergence for power series 675
5.32.14 Normed spaces with the Heine-Borel property 675
5.32.15 Intersecting chains of compact sets and the Baire property 676
5.32.16 Continuity 680
5.32.17 Arithmetic Preserves Topological Properties 682
5.32.18 Homeomorphisms 690
5.32.19 Discrete 692
5.32.20 Completeness of "Isometry" (up to constant bounds) . . 692
5.32.21 Connected Normed Spaces 694
5.33 Linear Decision Procedure for Normed Spaces 696

6 Vector Analysis 701

6.1 Elementary Topology in Euclidean Space 701
6.1.1 Continuity of the representation WRT an orthogonal basis 701
6.1.2 Balls in Euclidean Space 703
6.1.3 Boxes 707
6.1.4 General Intervals 721
6.1.5 Bounded Projections 725
6.1.6 Structural rules for pointwise continuity 725
6.1.7 Structural rules for setwise continuity 726
6.1.8 Openness of halfspaces. 726
6.1.9 Closure and Interior of halfspaces and hyperplanes . . . 726
6.1.10 Some more convenient intermediate-value theorem formulations 729
6.1.11 Limit Component Bounds 729
6.1.12 Class Instances 735
6.1.13 Compact Boxes 736
6.1.14 Componentwise limits and continuity 738
6.1.15 Continuous Extension 740
6.1.16 Separability 742
6.1.17 Diameter 744
6.1.18 Relating linear images to open/closed/interior/closure/connected 745
6.1.19 "Isometry" (up to constant bounds) of Injective Linear Map 747
6.1.20 Some properties of a canonical subspace 750

6.1.21 Set Distance . . . 752
6.2 Line Segment . . . 754
6.2.1 Topological Properties of Convex Sets, Metric Spaces and Functions . . . 754
6.2.2 Midpoint . . . 757
6.2.3 Open and closed segments . . . 759
6.2.4 Betweenness . . . 774
6.3 Convex Sets and Functions on (Normed) Euclidean Spaces . . . 777
6.3.1 Topological Properties of Convex Sets and Functions . . . 778
6.3.2 Relative interior of a set . . . 779
6.3.3 Openness and compactness are preserved by convex hull operation . . . 793
6.3.4 Extremal points of a simplex are some vertices . . . 797
6.3.5 Closest point of a convex set is unique, with a continuous projection . . . 801
6.3.6 More convexity generalities . . . 810
6.3.7 Convex set as intersection of halfspaces . . . 810
6.3.8 Convexity of general and special intervals . . . 811
6.3.9 On *real*, *is_interval*, *convex* and *connected* are all equivalent . . . 813
6.3.10 Another intermediate value theorem formulation . . . 814
6.3.11 A bound within an interval . . . 815
6.3.12 Representation of any interval as a finite convex hull . . . 817
6.3.13 Bounded convex function on open set is continuous . . . 818
6.3.14 Upper bound on a ball implies upper and lower bounds 820

7 Unsorted 825

7.0.1 Shrinking towards the interior of a convex set . . . 826
7.0.2 Some obvious but surprisingly hard simplex lemmas . . . 831
7.0.3 Relative interior of convex set . . . 839
7.0.4 The relative frontier of a set . . . 848
7.0.5 Convexity on direct sums . . . 878
7.0.6 Explicit formulas for interior and relative interior of convex hull . . . 885
7.0.7 Similar results for closure and (relative or absolute) frontier . . . 892
7.0.8 Coplanarity, and collinearity in terms of affine hull . . . 896
7.0.9 Basic lemmas about hyperplanes and halfspaces . . . 906
7.0.10 Use set distance for an easy proof of separation properties 907
7.0.11 Connectedness of the intersection of a chain . . . 909
7.0.12 Proper maps, including projections out of compact sets 912
7.0.13 Closure of conic hulls . . . 913

7.0.14 Trivial fact: convexity equals connectedness for collinear sets . . . 916
7.0.15 Some stepping theorems . . . 926
7.0.16 General case without assuming closure and getting non-strict separation . . . 929
7.0.17 Some results on decomposing convex hulls: intersections, simplicial subdivision . . . 933
7.0.18 Lower-dimensional affine subsets are nowhere dense . . . 945
7.0.19 Parallel slices, etc . . . 947
7.0.20 Paracompactness . . . 951
7.0.21 Closed-graph characterization of continuity . . . 954
7.0.22 The union of two collinear segments is another segment 956
7.0.23 Covering an open set by a countable chain of compact sets . . . 960
7.0.24 Orthogonal complement . . . 962
7.0.25 A non-injective linear function maps into a hyperplane. 964
7.1 Path-Connectedness . . . 966
7.1.1 Paths and Arcs . . . 966
7.1.2 Invariance theorems . . . 967
7.1.3 Basic lemmas about paths . . . 969
7.1.4 Path Images . . . 973
7.1.5 Simple paths with the endpoints removed . . . 975
7.1.6 The operations on paths . . . 976
7.1.7 Some reversed and "if and only if" versions of joining theorems . . . 978
7.1.8 The joining of paths is associative . . . 981
7.1.9 Subpath . . . 983
7.1.10 There is a subpath to the frontier . . . 986
7.1.11 Shift Path to Start at Some Given Point . . . 988
7.1.12 Straight-Line Paths . . . 991
7.1.13 Segments via convex hulls . . . 995
7.1.14 Bounding a point away from a path . . . 998
7.1.15 Path component . . . 998
7.1.16 Path connectedness of a space . . . 1000
7.1.17 Lemmas about path-connectedness . . . 1005
7.1.18 Path components . . . 1008
7.1.19 Path components . . . 1009
7.1.20 Paths and path-connectedness . . . 1018
7.1.21 Path components . . . 1019
7.1.22 Sphere is path-connected . . . 1022
7.1.23 Every annulus is a connected set . . . 1029
7.1.24 Relations between components and path components . 1030
7.1.25 Existence of unbounded components . . . 1032
7.1.26 The *inside* and *outside* of a Set . . . 1034

7.1.27 Condition for an open map's image to contain a ball . 1050
7.1.28 Rectangular paths 1056
7.2 Neighbourhood bases and Locally path-connected spaces 1057
7.2.1 Neighbourhood Bases 1057
7.2.2 Locally path-connected spaces 1059
7.2.3 Locally connected spaces 1069
7.2.4 Dimension of a topological space 1079
7.3 Some Uncountable Sets 1083
7.4 Homotopy of Maps 1086
7.4.1 Trivial properties 1087
7.4.2 Homotopy with P is an equivalence relation 1089
7.4.3 Continuity lemmas 1091
7.4.4 Homotopy of paths, maintaining the same endpoints . 1096
7.4.5 Group properties for homotopy of paths 1100
7.4.6 Homotopy of loops without requiring preservation of endpoints 1101
7.4.7 Relations between the two variants of homotopy 1103
7.4.8 Homotopy of "nearby" function, paths and loops 1107
7.4.9 Homotopy and subpaths 1109
7.4.10 Simply connected sets 1112
7.4.11 Contractible sets 1115
7.4.12 Starlike sets 1117
7.4.13 The slotted complex plane 1119
7.4.14 Contractible sets 1123
7.4.15 Local versions of topological properties in general . . . 1124
7.4.16 An induction principle for connected sets 1128
7.4.17 Basic properties of local compactness 1130
7.4.18 Sura-Bura's results about compact components of sets 1138
7.4.19 Special cases of local connectedness and path connectedness 1142
7.4.20 Relations between components and path components . 1149
7.4.21 Components, continuity, openin, closedin 1153
7.4.22 Existence of isometry between subspaces of same dimension 1155
7.4.23 Retracts, in a general sense, preserve (co)homotopic triviality) 1160
7.4.24 Homotopy equivalence 1163
7.4.25 Homotopy equivalence of topological spaces. 1163
7.4.26 Contractible spaces 1166
7.4.27 Misc other results 1178
7.4.28 Some simple positive connection theorems 1179
7.4.29 Self-homeomorphisms shuffling points about 1185
7.4.30 Nullhomotopic mappings 1204

7.5 Euclidean space and n-spheres, as subtopologies of n-dimensional space . . . 1208
7.5.1 Euclidean spaces as abstract topologies . . . 1208
7.5.2 n-dimensional spheres . . . 1212
7.6 Various Forms of Topological Spaces . . . 1218
7.6.1 Connected topological spaces . . . 1218
7.6.2 The notion of "separated between" (complement of "connected between)" . . . 1219
7.6.3 Connected components . . . 1224
7.6.4 Monotone maps (in the general topological sense) . . . 1228
7.6.5 Other countability properties . . . 1232
7.6.6 Neigbourhood bases EXTRAS . . . 1238
7.6.7 T_0 spaces and the Kolmogorov quotient . . . 1240
7.6.8 Kolmogorov quotients . . . 1242
7.6.9 Closed diagonals and graphs . . . 1246
7.6.10 KC spaces, those where all compact sets are closed. . . . 1248
7.6.11 Technical results about proper maps, perfect maps, etc 1255
7.6.12 Regular spaces . . . 1262
7.6.13 Locally compact spaces . . . 1276
7.6.14 Special characterizations of classes of functions into and out of R . . . 1291
7.6.15 Normal spaces . . . 1295
7.6.16 Hereditary topological properties . . . 1302
7.6.17 Limits in a topological space . . . 1303
7.6.18 Quasi-components . . . 1305
7.6.19 Additional quasicomponent and continuum properties like Boundary Bumping . . . 1320
7.6.20 Compactly generated spaces (k-spaces) . . . 1327
7.7 Abstract Metric Spaces . . . 1339
7.7.1 Metric topology . . . 1341
7.7.2 Bounded sets . . . 1345
7.7.3 Subspace of a metric space . . . 1348
7.7.4 Abstract type of metric spaces . . . 1349
7.7.5 The discrete metric . . . 1352
7.7.6 Metrizable spaces . . . 1353
7.7.7 Limits at a point in a topological space . . . 1358
7.7.8 Normal spaces and metric spaces . . . 1359
7.7.9 Topological limitin in metric spaces . . . 1359
7.7.10 Cauchy sequences and complete metric spaces . . . 1362
7.7.11 Totally bounded subsets of metric spaces . . . 1377
7.7.12 Compactness in metric spaces . . . 1383
7.7.13 Continuous functions on metric spaces . . . 1394
7.7.14 Completely metrizable spaces . . . 1398
7.7.15 Product metric . . . 1402

7.7.16 More sequential characterizations in a metric space . . 1412
7.7.17 Three strong notions of continuity for metric spaces . . 1420
7.7.18 Isometries 1438
7.7.19 "Capped" equivalent bounded metrics and general product metrics 1439
7.8 Infinite sums 1451
7.8.1 Definition and syntax 1451
7.8.2 General properties 1452
7.8.3 Absolute convergence 1492
7.8.4 Extended reals and nats 1496
7.8.5 Real numbers 1499
7.8.6 Complex numbers 1500
7.8.7 Infinite sums of formal power series 1529
7.9 Ordered Euclidean Space 1531
7.10 Arcwise-Connected Sets 1538
7.10.1 The Brouwer reduction theorem 1539
7.10.2 Arcwise Connections 1541
7.10.3 Density of points with dyadic rational coordinates . . . 1541
7.10.4 Accessibility of frontier points 1589
7.11 The Urysohn lemma, its consequences and other advanced material about metric spaces 1593
7.11.1 Urysohn lemma and Tietze's theorem 1593
7.11.2 Random metric space stuff 1608
7.11.3 Hereditarily normal spaces 1609
7.11.4 Completely regular spaces 1612
7.11.5 More generally, the k-ification functor 1622
7.11.6 One-point compactifications and the Alexandroff extension construction 1626
7.11.7 Extending continuous maps "pointwise" in a regular space 1644
7.11.8 Extending Cauchy continuous functions to the closure . 1647
7.11.9 Metric space of bounded functions 1659
7.11.10 Metric space of continuous bounded functions 1665
7.11.11 Existence of completion for any metric space M as a subspace of M=>R 1669
7.11.12 Contractions 1672
7.11.13 The Baire Category Theorem 1675
7.11.14 Sierpinski-Hausdorff type results about countable closed unions 1681
7.11.15 The Tychonoff embedding 1684
7.11.16 Urysohn and Tietze analogs for completely regular spaces 1686
7.11.17 Size bounds on connected or path-connected spaces . . 1691
7.11.18 Lavrentiev extension etc 1696
7.11.19 Embedding in products and hence more about completely metrizable spaces 1704

7.11.20 Theorems from Kuratowski . . . 1711
7.11.21 A perfect set in common cases must have at least the cardinality of the continuum . . . 1720
7.11.22 A set of points sparse in another set . . . 1729
7.11.23 Co-sparseness filter . . . 1733
7.11.24 Isolate and discrete . . . 1735
7.12 Operator Norm . . . 1742
7.13 Limits on the Extended Real Number Line . . . 1747
7.13.1 Extended-Real.thy . . . 1753
7.13.2 Extended-Nonnegative-Real.thy . . . 1767
7.13.3 monoset . . . 1768
7.13.4 Relate extended reals and the indicator function . . . 1785
7.14 Radius of Convergence and Summation Tests . . . 1786
7.14.1 Convergence tests for infinite sums . . . 1786
7.14.2 Radius of convergence . . . 1797
7.15 Uniform Limit and Uniform Convergence . . . 1806
7.15.1 Definition . . . 1806
7.15.2 Exchange limits . . . 1808
7.15.3 Uniform limit theorem . . . 1810
7.15.4 Comparison Test . . . 1815
7.15.5 Weierstrass M-Test . . . 1818
7.15.6 Structural introduction rules . . . 1821
7.15.7 Power series and uniform convergence . . . 1827
7.15.8 Tannery's Theorem . . . 1828
7.16 Bounded Linear Function . . . 1830
7.16.1 Intro rules for *bounded_linear* . . . 1830
7.16.2 declaration of derivative/continuous/tendsto introduction rules for bounded linear functions . . . 1831
7.16.3 Type of bounded linear functions . . . 1832
7.16.4 Type class instantiations . . . 1832
7.16.5 On Euclidean Space . . . 1837
7.16.6 concrete bounded linear functions . . . 1842
7.16.7 The strong operator topology on continuous linear operators . . . 1846
7.17 Derivative . . . 1848
7.17.1 Derivatives . . . 1848
7.17.2 Derivative with composed bilinear function . . . 1848
7.17.3 Differentiability . . . 1850
7.17.4 Frechet derivative and Jacobian matrix . . . 1852
7.17.5 Differentiability implies continuity . . . 1853
7.17.6 The chain rule . . . 1854
7.17.7 Composition rules stated just for differentiability . . . 1855
7.17.8 Uniqueness of derivative . . . 1855
7.17.9 Derivatives of local minima and maxima are zero . . . 1858

7.17.10 One-dimensional mean value theorem 1860
7.17.11 More general bound theorems 1861
7.17.12 Differentiability of inverse function (most basic form) . 1870
7.17.13 Uniformly convergent sequence of derivatives 1875
7.17.14 Differentiation of a series 1882
7.17.15 Derivative as a vector 1884
7.17.16 Field differentiability 1891
7.17.17 Field derivative 1896
7.17.18 Relation between convexity and derivative 1901
7.17.19 Partial derivatives 1902
7.17.20 Differentiable case distinction 1906
7.17.21 The Inverse Function Theorem 1908
7.17.22 Piecewise differentiable functions 1915
7.17.23 The concept of continuously differentiable 1918
7.18 Finite Cartesian Products of Euclidean Spaces 1926
7.18.1 Closures and interiors of halfspaces 1927
7.18.2 Bounds on components etc. relative to operator norm . 1928
7.18.3 Convex Euclidean Space 1935
7.18.4 Arbitrarily good rational approximations 1935
7.18.5 Derivative 1936
7.18.6 Routine results connecting the types (*real*, *1*) *vec* and *real* 1936
7.19 Complex Analysis Basics 1937
7.19.1 General lemmas 1938
7.19.2 Holomorphic functions 1941
7.19.3 Analyticity on a set 1946
7.19.4 Analyticity at a point 1951
7.19.5 Combining theorems for derivative with “analytic at” hypotheses 1952
7.19.6 Complex differentiation of sequences and series 1952
7.19.7 Taylor on Complex Numbers 1954
7.20 Complex Transcendental Functions 1958
7.20.1 Möbius transformations 1958
7.20.2 The Exponential Function 1959
7.20.3 Euler and de Moivre formulas 1960
7.20.4 Relationships between real and complex trigonometric and hyperbolic functions 1962
7.20.5 More on the Polar Representation of Complex Numbers 1963
7.20.6 Taylor series for complex exponential, sine and cosine . 1973
7.20.7 The argument of a complex number (HOL Light version) 1976
7.20.8 Analytic properties of tangent function 1981
7.20.9 The principal branch of the Complex logarithm 1982
7.20.10 Relation to Real Logarithm 1983
7.20.11 Derivative of Ln away from the branch cut 1984

7.20.12 Quadrant-type results for Ln . . . 1990
7.20.13 More Properties of Ln . . . 1992
7.20.14 Uniform convergence and products . . . 1995
7.20.15 The Argument of a Complex Number . . . 2000
7.20.16 The Unwinding Number and the Ln product Formula . 2006
7.20.17 Characterisation of $Im\ (Ln\ z)$ (Wenda Li) . . . 2008
7.20.18 Relation between Ln and Arg2pi, and hence continuity of Arg2pi . . . 2009
7.20.19 Complex Powers . . . 2011
7.20.20 Some Limits involving Logarithms . . . 2020
7.20.21 Relation between Square Root and exp/ln, hence its derivative . . . 2023
7.20.22 Complex arctangent . . . 2027
7.20.23 Real arctangent . . . 2033
7.20.24 Bounds on pi using real arctangent . . . 2036
7.20.25 Inverse Sine . . . 2036
7.20.26 Inverse Cosine . . . 2040
7.20.27 Upper and Lower Bounds for Inverse Sine and Cosine . 2043
7.20.28 Interrelations between Arcsin and Arccos . . . 2044
7.20.29 Relationship with Arcsin on the Real Numbers . . . 2045
7.20.30 Relationship with Arccos on the Real Numbers . . . 2045
7.20.31 Continuity results for arcsin and arccos . . . 2045
7.20.32 Roots of unity . . . 2047
7.20.33 Normalisation of angles . . . 2048
7.20.34 Convexity of circular sectors in the complex plane . . . 2050
7.20.35 Complex cones . . . 2056

8 Measure and Integration Theory 2063

8.1 Sigma Algebra . . . 2063
8.1.1 Families of sets . . . 2063
8.1.2 Measure type . . . 2092
8.1.3 The smallest σ-algebra regarding a function . . . 2105
8.2 Measurability Prover . . . 2111
8.2.1 Measurability for (co)inductive predicates . . . 2119
8.3 Measure Spaces . . . 2125
8.3.1 Relate extended reals and the indicator function . . . 2125
8.3.2 Extend binary sets . . . 2126
8.3.3 Properties of a premeasure μ . . . 2127
8.3.4 Properties of *emeasure* . . . 2134
8.3.5 μ-null sets . . . 2144
8.3.6 The almost everywhere filter (i.e. quantifier) . . . 2147
8.3.7 σ-finite Measures . . . 2153
8.3.8 Measure space induced by distribution of $(\rightarrow_M)$-functions 2155

8.3.9 Real measure values . . . 2158
8.3.10 Set of measurable sets with finite measure . . . 2162
8.3.11 Measurable sets formed by unions and intersections . . 2163
8.3.12 Measure spaces with *emeasure M* (*space M*) $< \infty$ . . . 2170
8.3.13 Counting space . . . 2175
8.3.14 Measure restricted to space . . . 2178
8.3.15 Null measure . . . 2182
8.3.16 Scaling a measure . . . 2182
8.3.17 Complete lattice structure on measures . . . 2183
8.4 Borel Space . . . 2207
8.4.1 Generic Borel spaces . . . 2211
8.4.2 Borel spaces on order topologies . . . 2219
8.4.3 Borel spaces on topological monoids . . . 2225
8.4.4 Borel spaces on Euclidean spaces . . . 2226
8.4.5 Borel measurable operators . . . 2233
8.4.6 Borel space on the extended reals . . . 2238
8.4.7 Borel space on the extended non-negative reals . . . 2241
8.4.8 LIMSEQ is borel measurable . . . 2243
8.5 Lebesgue Integration for Nonnegative Functions . . . 2252
8.5.1 Approximating functions . . . 2252
8.5.2 Simple function . . . 2254
8.5.3 Simple integral . . . 2264
8.5.4 Integral on nonnegative functions . . . 2270
8.5.5 Integral under concrete measures . . . 2291
8.6 Binary Product Measure . . . 2311
8.6.1 Binary products . . . 2311
8.6.2 Binary products of σ-finite emeasure spaces . . . 2319
8.6.3 Fubinis theorem . . . 2324
8.6.4 Products on counting spaces, densities and distributions 2325
8.6.5 Product of Borel spaces . . . 2337
8.7 Finite Product Measure . . . 2338
8.7.1 More about Function restricted by *extensional* . . . 2338
8.7.2 Finite product spaces . . . 2340
8.7.3 Measurability . . . 2366
8.8 Caratheodory Extension Theorem . . . 2369
8.8.1 Characterizations of Measures . . . 2370
8.8.2 Caratheodory's theorem . . . 2379
8.8.3 Volumes . . . 2380
8.9 Bochner Integration for Vector-Valued Functions . . . 2388
8.9.1 Restricted measure spaces . . . 2437
8.9.2 Measure spaces with an associated density . . . 2438
8.9.3 Distributions . . . 2440
8.9.4 Lebesgue integration on *count_space* . . . 2442
8.9.5 Point measure . . . 2443

8.9.6 Lebesgue integration on *null_measure* 2444
8.9.7 Legacy lemmas for the real-valued Lebesgue integral . . 2444
8.9.8 Product measure 2451
8.10 Complete Measures 2462
8.11 Regularity of Measures 2489
8.12 Lebesgue Measure 2498
8.12.1 Measures defined by monotonous functions 2498
8.12.2 Lebesgue-Borel measure 2505
8.12.3 Borel measurability 2508
8.12.4 Measurability of continuous functions 2511
8.12.5 Affine transformation on the Lebesgue-Borel 2517
8.12.6 Lebesgue measurable sets 2525
8.12.7 Translation preserves Lebesgue measure 2526
8.12.8 A nice lemma for negligibility proofs 2528
8.12.9 *F_sigma* and *G_delta* sets. 2533
8.13 Tagged Divisions for Henstock-Kurzweil Integration 2536
8.13.1 Some useful lemmas about intervals 2536
8.13.2 Bounds on intervals where they exist 2537
8.13.3 The notion of a gauge — simply an open set containing the point 2539
8.13.4 Attempt a systematic general set of "offset" results for components 2540
8.13.5 Divisions 2540
8.13.6 Tagged (partial) divisions 2553
8.13.7 Functions closed on boxes: morphisms from boxes to monoids 2559
8.13.8 Special case of additivity we need for the FTC 2569
8.13.9 Fine-ness of a partition w.r.t. a gauge 2570
8.13.10 Some basic combining lemmas 2570
8.13.11 The set we're concerned with must be closed 2571
8.13.12 General bisection principle for intervals; might be useful elsewhere 2571
8.13.13 Cousin's lemma 2576
8.13.14 A technical lemma about "refinement" of division . . . 2577
8.13.15 Division filter 2585
8.14 Henstock-Kurzweil Gauge Integration in Many Dimensions . . 2586
8.14.1 Content (length, area, volume, etc.) of an interval . . . 2586
8.14.2 Gauge integral 2592
8.14.3 Basic theorems about integrals 2593
8.14.4 Cauchy-type criterion for integrability 2608
8.14.5 Additivity of integral on abutting intervals 2610
8.14.6 A sort of converse, integrability on subintervals 2615
8.14.7 Bounds on the norm of Riemann sums and the integral itself 2620

8.14.8 Similar theorems about relationship among components 2621
8.14.9 Uniform limit of integrable functions is integrable . . . 2625
8.14.10 Negligible sets 2628
8.14.11 Some other trivialities about negligible sets 2636
8.14.12 Finite case of the spike theorem is quite commonly needed 2638
8.14.13 In particular, the boundary of an interval is negligible . 2639
8.14.14 Integrability of continuous functions 2640
8.14.15 Specialization of additivity to one dimension 2642
8.14.16 A useful lemma allowing us to factor out the content size 2642
8.14.17 Fundamental theorem of calculus 2643
8.14.18 Taylor series expansion 2648
8.14.19 Only need trivial subintervals if the interval itself is trivial 2650
8.14.20 Integrability on subintervals 2652
8.14.21 Combining adjacent intervals in 1 dimension 2653
8.14.22 Reduce integrability to "local" integrability 2654
8.14.23 Second FTC or existence of antiderivative 2655
8.14.24 Combined fundamental theorem of calculus 2657
8.14.25 General "twiddling" for interval-to-interval function image 2657
8.14.26 Special case of a basic affine transformation 2659
8.14.27 Special case of stretching coordinate axes separately . . 2664
8.14.28 even more special cases 2669
8.14.29 Stronger form of FCT; quite a tedious proof 2670
8.14.30 Stronger form with finite number of exceptional points 2678
8.14.31 This doesn't directly involve integration, but that gives an easy proof 2684
8.14.32 Generalize a bit to any convex set 2685
8.14.33 Integrating characteristic function of an interval 2688
8.14.34 Integrals on set differences 2694
8.14.35 More lemmas that are useful later 2697
8.14.36 Continuity of the integral (for a 1-dimensional interval) 2699
8.14.37 A straddling criterion for integrability 2703
8.14.38 Adding integrals over several sets 2707
8.14.39 Also tagged divisions 2710
8.14.40 Henstock's lemma 2711
8.14.41 Monotone convergence (bounded interval first) 2716
8.14.42 differentiation under the integral sign 2730
8.14.43 Exchange uniform limit and integral 2734
8.14.44 Integration by parts 2736
8.14.45 Integration by substitution 2737
8.14.46 Compute a double integral using iterated integrals and switching the order of integration 2739
8.14.47 Definite integrals for exponential and power function . 2747
8.14.48 Adaption to ordered Euclidean spaces and the Cartesian Euclidean space 2752

9 Kronecker's Theorem with Applications **2753**

9.1 Dirichlet's Approximation Theorem 2753
9.2 Kronecker's Approximation Theorem: the One-dimensional Case 2759
9.3 Extension of Kronecker's Theorem to Simultaneous Approximation 2763
9.3.1 Towards Lemma 1 2763
9.3.2 Towards Lemma 2 2766
9.3.3 Towards lemma 3 2769
9.3.4 And finally Kroncker's theorem itself 2775
9.4 Bernstein-Weierstrass and Stone-Weierstrass 2783
9.4.1 Bernstein polynomials 2783
9.4.2 Explicit Bernstein version of the 1D Weierstrass approximation theorem 2785
9.4.3 General Stone-Weierstrass theorem 2787
9.4.4 Polynomial functions 2800
9.4.5 Stone-Weierstrass theorem for polynomial functions . . 2805
9.4.6 Polynomial functions as paths 2809
9.5 Radon-Nikodým Derivative 2814
9.5.1 Absolutely continuous 2818
9.5.2 Existence of the Radon-Nikodym derivative 2819
9.5.3 Uniqueness of densities 2828
9.5.4 Radon-Nikodym derivative 2835

10 Integrals over a Set **2841**

10.1 Notation 2841
10.2 Basic properties 2841

1.13.22 The topology generated by some (open) subsets

In the definition below of a generated topology, the *Empty* case is not necessary, as it follows from *UN* taking for *K* the empty set. However, it is convenient to have, and is never a problem in proofs, so I prefer to write it down explicitly.

We do not require *UNIV* to be an open set, as this will not be the case in applications. (We are thinking of a topology on a subset of *UNIV*, the remaining part of *UNIV* being irrelevant.)

inductive *generate_topology_on* **for** *S* **where**
Empty: *generate_topology_on S* {}
| *Int*: *generate_topology_on S a* ⟹ *generate_topology_on S b* ⟹ *generate_topology_on S* (*a* ∩ *b*)

1.13.25 Pullback topology

Pulling back a topology by map gives again a topology. *subtopology* is a special case of this notion, pulling back by the identity. We introduce the general notion as we will need it to define the strong operator topology on the space of continuous linear operators, by pulling back the product topology on the space of all functions.

pullback_topology A f T is the pullback of the topology T by the map f on the set A.

definition *pullback_topology*::('*a set*) ⇒ ('*a* ⇒ '*b*) ⇒ ('*b topology*) ⇒ ('*a topology*)
where *pullback_topology A f T* = *topology* (λ*S*. ∃ *U*. *openin T U* ∧ *S* = *f*−‘*U* ∩ *A*)

2.2.1 Abstract

The following document presents a proof that the Continuum is uncountable. It is formalised in the Isabelle/Isar theorem proving system.

Theorem: The Continuum $\mathbb{R}$ is not denumerable. In other words, there does not exist a function f: $\mathbb{N} \Rightarrow \mathbb{R}$ such that f is surjective.

Outline: An elegant informal proof of this result uses Cantor's Diagonalisation argument. The proof presented here is not this one.

First we formalise some properties of closed intervals, then we prove the Nested Interval Property. This property relies on the completeness of the Real numbers and is the foundation for our argument. Informally it states that an intersection of countable closed intervals (where each successive interval is a subset of the last) is non-empty. We then assume a surjective function f: $\mathbb{N} \Rightarrow \mathbb{R}$ exists and find a real x such that x is not in the range of f by generating a sequence of closed intervals then using the Nested Interval Property.

theorem *real_non_denum*: ∄*f* :: *nat* ⇒ *real*. *surj f*
proof
assume ∃*f*::*nat* ⇒ *real*. *surj f*

then obtain $f :: nat \Rightarrow real$ **where** *surj f* **..**

First we construct a sequence of nested intervals, ignoring *range f*.

have $a < b \Longrightarrow \exists ka\ kb.\ ka < kb \wedge \{ka..kb\} \subseteq \{a..b\} \wedge c \notin \{ka..kb\}$ **for** $a\ b\ c ::$ *real*
by (*auto simp add*: *not_le cong*: *conj_cong*)
(*metis dense le_less_linear less_linear less_trans order_refl*)
then obtain $i\ j$ **where** *ij*:
$a < b \Longrightarrow i\ a\ b\ c < j\ a\ b\ c$
$a < b \Longrightarrow \{i\ a\ b\ c\ ..\ j\ a\ b\ c\} \subseteq \{a\ ..\ b\}$
$a < b \Longrightarrow c \notin \{i\ a\ b\ c\ ..\ j\ a\ b\ c\}$
for $a\ b\ c ::$ *real*
by *metis*

define *ivl* **where** *ivl* =
rec_nat (*f 0 + 1*, *f 0 + 2*) (λ*n x*. (*i* (*fst x*) (*snd x*) (*f n*), *j* (*fst x*) (*snd x*) (*f n*)))
define *I* **where** $I\ n = \{fst\ (ivl\ n)\ ..\ snd\ (ivl\ n)\}$ **for** *n*

have *ivl* [*simp*]:
ivl 0 = (*f 0 + 1*, *f 0 + 2*)
⋀*n*. *ivl* (*Suc n*) = (*i* (*fst* (*ivl n*)) (*snd* (*ivl n*)) (*f n*), *j* (*fst* (*ivl n*)) (*snd* (*ivl n*)) (*f n*))
unfolding *ivl_def* **by** *simp_all*

This is a decreasing sequence of non-empty intervals.

have *less*: $fst\ (ivl\ n) < snd\ (ivl\ n)$ **for** *n*
by (*induct n*) (*auto intro*!: *ij*)

have *decseq I*
unfolding *I_def decseq_Suc_iff ivl fst_conv snd_conv*
by (*intro ij allI less*)

Now we apply the finite intersection property of compact sets.

have $I\ 0 \cap (\bigcap i.\ I\ i) \neq \{\}$
proof (*rule compact_imp_fip_image*)
fix *S* :: *nat set*
assume *fin*: *finite S*
have $\{\} \subset I\ (Max\ (insert\ 0\ S))$
unfolding *I_def* **using** *less*[*of Max* (*insert 0 S*)] **by** *auto*
also have $I\ (Max\ (insert\ 0\ S)) \subseteq (\bigcap i{\in}insert\ 0\ S.\ I\ i)$
using *fin decseqD*[*OF* ‹*decseq I*›, *of* _ *Max* (*insert 0 S*)]
by (*auto simp*: *Max_ge_iff*)
also have $(\bigcap i{\in}insert\ 0\ S.\ I\ i) = I\ 0 \cap (\bigcap i{\in}S.\ I\ i)$
by *auto*
finally show $I\ 0 \cap (\bigcap i{\in}S.\ I\ i) \neq \{\}$
by *auto*
qed (*auto simp*: *I_def*)
then obtain *x* **where** $x \in I\ n$ **for** *n*

```
    by blast
  moreover from ‹surj f› obtain j where x = f j
    by blast
  ultimately have f j ∈ I (Suc j)

3.1 Function Topology

We want to define the general product topology.

The product topology on a product of topological spaces is generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. This is the coarsest topology for which the projection to each factor is continuous.

To form a product of objects in Isabelle/HOL, all these objects should be subsets of a common type 'a. The product is then $Pi_E\ I\ X$, the set of elements from $'i$ to $'a$ such that the i-th coordinate belongs to $X\ i$ for all $i \in I$.

Hence, to form a product of topological spaces, all these spaces should be subsets of a common type. This means that type classes can not be used to define such a product if one wants to take the product of different topological spaces (as the type 'a can only be given one structure of topological space using type classes). On the other hand, one can define different topologies (as introduced in *thy*) on one type, and these topologies do not need to share the same maximal open set. Hence, one can form a product of topologies in this sense, and this works well. The big caveat is that it does not interact

well with the main body of topology in Isabelle/HOL defined in terms of type classes... For instance, continuity of maps is not defined in this setting.

As the product of different topological spaces is very important in several areas of mathematics (for instance adeles), I introduce below the product topology in terms of topologies, and reformulate afterwards the consequences in terms of type classes (which are of course very handy for applications).

Given this limitation, it looks to me that it would be very beneficial to revamp the theory of topological spaces in Isabelle/HOL in terms of topologies, and keep the statements involving type classes as consequences of more general statements in terms of topologies (but I am probably too naive here).

Here is an example of a reformulation using topologies. Let

$$\begin{aligned}&\mathit{continuous\_map}\ T1\ T2\ f =\\ &\quad((\forall\ U.\ \mathit{openin}\ T2\ U \longrightarrow \mathit{openin}\ T1\ (f-`U \cap \mathit{topspace}(T1)))\\ &\qquad\wedge\ (f`(\mathit{topspace}\ T1) \subseteq (\mathit{topspace}\ T2)))\end{aligned}$$

be the natural continuity definition of a map from the topology *T1* to the topology *T2*. Then the current *continuous_on* (with type classes) can be redefined as

$$\begin{aligned}&\mathit{continuous\_on}\ s\ f =\\ &\quad \mathit{continuous\_map}\ (\mathit{top\_of\_set}\ s)\ (\mathit{topology}\ \mathit{euclidean})\ f\end{aligned}$$

In fact, I need *continuous_map* to express the continuity of the projection on subfactors for the product topology, in Lemma *continuous_on_restrict_product_topology*, and I show the above equivalence in Lemma *continuous_map_iff_continuous*.

I only develop the basics of the product topology in this theory. The most important missing piece is Tychonov theorem, stating that a product of compact spaces is always compact for the product topology, even when the product is not finite (or even countable).

I realized afterwards that this theory has a lot in common with `~~/src/HOL/Library/Finite_Map.thy`.

3.1.1 The product topology

We can now define the product topology, as generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. Equivalently, it is generated by sets which are one open set along one single coordinate, and the whole space along other coordinates. In fact, this is only equivalent for nonempty products, but for the empty product the first formulation is better (the second one gives an empty product space, while an empty product should have exactly one point, equal to *undefined* along all coordinates.

So, we use the first formulation, which moreover seems to give rise to more straightforward proofs.

definition *product_topology*::('*i* ⇒ ('*a topology*)) ⇒ ('*i set*) ⇒ (('*i* ⇒ '*a*) *topology*)
where *product_topology T I* =
topology_generated_by {(Π$_E$ *i*∈*I*. *X i*) |*X*. (∀ *i*. *openin* (*T i*) (*X i*)) ∧ *finite* {*i*. *X i* ≠ *topspace* (*T i*)}}

abbreviation *powertop_real* :: '*a set* ⇒ ('*a* ⇒ *real*) *topology*
where *powertop_real* ≡ *product_topology* (λ*i*. *euclideanreal*)

The total set of the product topology is the product of the total sets along each coordinate.

7.4 Homotopy of Maps

theory *Homotopy*
imports *Path_Connected Product_Topology Uncountable_Sets*
begin

definition *homotopic_with*
where
homotopic_with P X Y f g ≡
(∃ *h*. *continuous_map* (*prod_topology* (*top_of_set* {*0..1*::*real*}) *X*) *Y h* ∧
(∀ *x*. *h*(*0*, *x*) = *f x*) ∧
(∀ *x*. *h*(*1*, *x*) = *g x*) ∧
(∀ *t* ∈ {*0..1*}. *P*(λ*x*. *h*(*t*,*x*))))

p, *q* are functions $X \to Y$, and the property P restricts all intermediate maps. We often just want to require that P fixes some subset, but to include the case of a loop homotopy, it is convenient to have a general property P.

abbreviation *homotopic_with_canon* ::
