Contents

1 Linear Algebra **31**

1.1 L2 Norm . . . 31
1.2 Inner Product Spaces and Gradient Derivative . . . 33
1.2.1 Real inner product spaces . . . 34
1.2.2 Class instances . . . 39
1.2.3 Gradient derivative . . . 41
1.3 Cartesian Products as Vector Spaces . . . 43
1.3.1 Product is a Module . . . 43
1.3.2 Product is a Real Vector Space . . . 44
1.3.3 Product is a Metric Space . . . 45
1.3.4 Product is a Complete Metric Space . . . 55
1.3.5 Product is a Normed Vector Space . . . 56
1.3.6 Product is Finite Dimensional . . . 60
1.4 Finite-Dimensional Inner Product Spaces . . . 61
1.4.1 Interlude: Some properties of real sets . . . 61
1.4.2 Type class of Euclidean spaces . . . 62
1.4.3 Subclass relationships . . . 66
1.4.4 Class instances . . . 67
1.4.5 Locale instances . . . 69
1.5 Elementary Linear Algebra on Euclidean Spaces . . . 70
1.5.1 More interesting properties of the norm . . . 72
1.5.2 Substandard Basis . . . 73
1.5.3 Orthogonality . . . 74
1.5.4 Orthogonality of a transformation . . . 75
1.5.5 Bilinear functions . . . 77
1.5.6 Adjoints . . . 78
1.5.7 Euclidean Spaces as Typeclass . . . 79
1.5.8 Linearity and Bilinearity continued . . . 80
1.5.9 We continue . . . 83
1.5.10 Infinity norm . . . 88
1.5.11 Collinearity . . . 91
1.5.12 Properties of special hyperplanes . . . 96
1.5.13 Orthogonal bases and Gram-Schmidt process . . . 98

1.5.14 Decomposing a vector into parts in orthogonal subspaces 101
1.5.15 Linear functions are (uniformly) continuous on any set 106
1.5.16 Topological properties of linear functions 106
1.6 Affine Sets 108
1.6.1 Affine set and affine hull 109
1.6.2 Affine Dependence 119
1.6.3 Some Properties of Affine Dependent Sets 123
1.6.4 Affine Dimension of a Set 127
1.7 Convex Sets and Functions 136
1.7.1 Convex Sets 136
1.7.2 Explicit expressions for convexity in terms of arbitrary sums 139
1.7.3 Convex Functions on a Set 142
1.7.4 Arithmetic operations on sets preserve convexity 147
1.7.5 Convexity of real functions 156
1.7.6 Convexity of the generalised binomial 160
1.7.7 Some inequalities: Applications of convexity 161
1.7.8 Misc related lemmas 163
1.7.9 Cones 163
1.7.10 Connectedness of convex sets 166
1.7.11 Convex hull 166
1.7.12 Relations among closure notions and corresponding hulls 176
1.7.13 Caratheodory's theorem 177
1.7.14 Some Properties of subset of standard basis 179
1.7.15 Moving and scaling convex hulls 179
1.7.16 Convexity of cone hulls 180
1.8 Conic sets and conic hull 181
1.9 Convex cones and corresponding hulls 185
1.9.1 Radon's theorem 189
1.9.2 Helly's theorem 191
1.9.3 Epigraphs of convex functions 192
1.9.4 A bound within a convex hull 193
1.10 Definition of Finite Cartesian Product Type 195
1.10.1 Finite Cartesian products, with indexing and lambdas . 195
1.10.2 Cardinality of vectors 196
1.10.3 Group operations and class instances 198
1.10.4 Basic componentwise operations on vectors 199
1.10.5 Real vector space 201
1.10.6 Topological space 201
1.10.7 Metric space 203
1.10.8 Normed vector space 206
1.10.9 Inner product space 207
1.10.10 Euclidean space 208

1.10.11 A naive proof procedure to lift really trivial arithmetic stuff from the basis of the vector space 210
1.10.12 Some frequently useful arithmetic lemmas over vectors 212
1.10.13 Matrix operations 214
1.10.14 Inverse matrices (not necessarily square) 219
1.11 Linear Algebra on Finite Cartesian Products 221
1.11.1 Type ('a, 'n) *vec* and fields as vector spaces 221
1.11.2 Some interesting theorems and interpretations 229
1.11.3 Rank of a matrix 230
1.11.4 Lemmas for working on *real^1/2/3/4* 233
1.11.5 The collapse of the general concepts to dimension one . 235
1.11.6 Routine results connecting the types (*real*, *1*) *vec* and *real* 235
1.11.7 Explicit vector construction from lists 236
1.11.8 lambda skolemization on cartesian products 237
1.11.9 Explicit formulas for low dimensions 239
1.11.10 Orthogonality of a matrix 239
1.11.11 Finding an Orthogonal Matrix 240
1.11.12 Scaling and isometry 242
1.11.13 Induction on matrix row operations 244
1.12 Traces and Determinants of Square Matrices 249
1.12.1 Trace 249
1.12.2 Relation to invertibility 264
1.12.3 Cramer's rule 267
1.12.4 Rotation, reflection, rotoinversion 270
1.13 Operators involving abstract topology 273
1.13.1 General notion of a topology as a value 273
1.13.2 The discrete topology 277
1.13.3 Subspace topology 278
1.13.4 The canonical topology from the underlying type class 282
1.13.5 Basic "localization" results are handy for connectedness. 282
1.13.6 Derived set (set of limit points) 285
1.13.7 Closure with respect to a topological space 288
1.13.8 Frontier with respect to topological space 296
1.13.9 Locally finite collections 301
1.13.10 Continuous maps 304
1.13.11 Open and closed maps (not a priori assumed continuous) 312
1.13.12 Quotient maps 320
1.13.13 Separated Sets 329
1.13.14 Homeomorphisms 331
1.13.15 Relation of homeomorphism between topological spaces 339
1.13.16 Connected topological spaces 340
1.13.17 Compact sets 350
1.13.18 Embedding maps 358

1.13.19 Retraction and section maps . . . 359
1.13.20 Continuity . . . 362
1.13.21 Half-global and completely global cases . . . 362
1.13.22 The topology generated by some (open) subsets . . . 366
1.13.23 Topology bases and sub-bases . . . 368
1.13.24 Continuity via bases/subbases, hence upper and lower semicontinuity . . . 371
1.13.25 Pullback topology . . . 375
1.13.26 Proper maps (not a priori assumed continuous) . . . 377
1.13.27 Perfect maps (proper, continuous and surjective) . . . 382
1.14 F-Sigma and G-Delta sets in a Topological Space . . . 383
1.15 Disjoint sum of arbitarily many spaces . . . 389

2 Topology **393**

2.1 Elementary Topology . . . 393
2.1.1 Topological Basis . . . 394
2.1.2 Countable Basis . . . 396
2.1.3 Polish spaces . . . 405
2.1.4 Limit Points . . . 405
2.1.5 Interior of a Set . . . 410
2.1.6 Closure of a Set . . . 414
2.1.7 Frontier (also known as boundary) . . . 417
2.1.8 Filters and the “eventually true” quantifier . . . 418
2.1.9 Limits . . . 419
2.1.10 Compactness . . . 422
2.1.11 Cartesian products . . . 434
2.1.12 Continuity . . . 436
2.1.13 Homeomorphisms . . . 438
2.1.14 On Linorder Topologies . . . 442
2.1.15 nhdsin and atin . . . 444
2.1.16 Limits in a topological space . . . 446
2.1.17 Pointwise continuity in topological spaces . . . 449
2.1.18 Combining theorems for continuous functions into the reals . . . 450
2.2 Non-Denumerability of the Continuum . . . 452
2.2.1 Abstract . . . 452
2.3 Abstract Topology 2 . . . 456
2.3.1 Closure . . . 459
2.3.2 Frontier . . . 460
2.3.3 Compactness . . . 461
2.3.4 Continuity . . . 462
2.3.5 Equality of continuous functions on closure and related results . . . 462

2.3.6 A function constant on a set . . . 463
2.3.7 Continuity relative to a union. . . . 464
2.3.8 Inverse function property for open/closed maps . . . 465
2.3.9 Seperability . . . 466
2.3.10 Closed Maps . . . 468
2.3.11 Open Maps . . . 468
2.3.12 Quotient maps . . . 468
2.3.13 Pasting lemmas for functions, for of casewise definitions 471
2.3.14 Retractions . . . 475
2.3.15 Retractions on a topological space . . . 480
2.3.16 Paths and path-connectedness . . . 482
2.3.17 Connected components . . . 486
2.3.18 Combining theorems for continuous functions into the reals . . . 491
2.3.19 A few cardinality results . . . 493

3 Connected Components 499

3.0.1 Connectedness . . . 499
3.0.2 Connected components, considered as a connectedness relation or a set . . . 500
3.0.3 The set of connected components of a set . . . 505
3.0.4 Proving a function is constant on a connected set by proving that a level set is open . . . 508
3.0.5 Preservation of Connectedness . . . 508
3.0.6 Lemmas about components . . . 510
3.0.7 Constancy of a function from a connected set into a finite, disconnected or discrete set . . . 513
3.1 Function Topology . . . 514
3.1.1 The product topology . . . 515
3.1.2 The Alexander subbase theorem . . . 532
3.1.3 Open Pi-sets in the product topology . . . 540
3.1.4 Relationship with connected spaces, paths, etc. . . . 543
3.1.5 Projections from a function topology to a component . 548
3.1.6 Limits . . . 549
3.2 The binary product topology . . . 551
3.3 Product Topology . . . 551
3.3.1 Definition . . . 551
3.3.2 Continuity . . . 555
3.3.3 Homeomorphic maps . . . 563
3.4 T1 and Hausdorff spaces . . . 567
3.5 T1 spaces with equivalences to many naturally "nice" properties. 567
3.5.1 Hausdorff Spaces . . . 572
3.6 Lindelöf spaces . . . 584

4 Functional Analysis **591**

4.1 A decision procedure for metric spaces 591

5 Elementary Metric Spaces **595**

5.1 Open and closed balls 595
5.2 Limit Points 602
5.3 Perfect Metric Spaces 602
5.4 Finite and discrete 603
5.5 Interior 604
5.6 Frontier 604
5.7 Limits 604
5.8 Continuity 607
5.9 Closure and Limit Characterization 610
5.10 Boundedness 612
5.11 Compactness 614
5.12 Banach fixed point theorem 619
5.13 Edelstein fixed point theorem 622
5.14 The diameter of a set 622
5.15 Metric spaces with the Heine-Borel property 627
5.16 Completeness 631
5.17 Cauchy continuity 635
5.18 Finite intersection property 637
5.19 Properties of Balls and Spheres 638
5.20 Distance from a Set 639
5.21 Infimum Distance 639
5.22 Separation between Points and Sets 644
5.23 Uniform Continuity 645
5.24 Continuity on a Compact Domain Implies Uniform Continuity 647
5.25 Theorems relating continuity and uniform continuity to closures 649
5.26 With Abstract Topology (TODO: move and remove dependency?) 654
5.27 Closed Nest 655
5.28 Making a continuous function avoid some value in a neighbourhood 657
5.29 Consequences for Real Numbers 657
5.30 The infimum of the distance between two sets 660
5.31 Diameter Lemma 664
5.32 Elementary Normed Vector Spaces 666
5.32.1 Orthogonal Transformation of Balls 666
5.32.2 Various Lemmas Combining Imports 666
5.32.3 Support 668
5.32.4 Intervals 669
5.32.5 Limit Points 669
5.32.6 Balls and Spheres in Normed Spaces 672

5.32.7 Various Lemmas on Normed Algebras 675
5.32.8 Filters 676
5.32.9 Trivial Limits 676
5.32.10 Limits 676
5.32.11 Limit Point of Filter 679
5.32.12 Boundedness 679
5.32.13 Relations among convergence and absolute convergence for power series 683
5.32.14 Normed spaces with the Heine-Borel property 683
5.32.15 Intersecting chains of compact sets and the Baire property 684
5.32.16 Continuity 688
5.32.17 Arithmetic Preserves Topological Properties 690
5.32.18 Homeomorphisms 697
5.32.19 Discrete 699
5.32.20 Completeness of "Isometry" (up to constant bounds) . . 700
5.32.21 Connected Normed Spaces 701
5.33 Linear Decision Procedure for Normed Spaces 704

6 Vector Analysis **709**

6.1 Elementary Topology in Euclidean Space 709
6.1.1 Continuity of the representation WRT an orthogonal basis 709
6.1.2 Balls in Euclidean Space 711
6.1.3 Boxes 715
6.1.4 General Intervals 729
6.1.5 Bounded Projections 733
6.1.6 Structural rules for pointwise continuity 733
6.1.7 Structural rules for setwise continuity 734
6.1.8 Openness of halfspaces. 734
6.1.9 Closure and Interior of halfspaces and hyperplanes . . . 734
6.1.10 Some more convenient intermediate-value theorem formulations 737
6.1.11 Limit Component Bounds 737
6.1.12 Class Instances 743
6.1.13 Compact Boxes 744
6.1.14 Componentwise limits and continuity 746
6.1.15 Continuous Extension 748
6.1.16 Separability 750
6.1.17 Diameter 752
6.1.18 Relating linear images to open/closed/interior/closure/connected 753
6.1.19 "Isometry" (up to constant bounds) of Injective Linear Map 755
6.1.20 Some properties of a canonical subspace 758

6.1.21 Set Distance 760
6.2 Line Segment 762
6.2.1 Topological Properties of Convex Sets, Metric Spaces and Functions 762
6.2.2 Midpoint 765
6.2.3 Open and closed segments 767
6.2.4 Betweenness 782
6.3 Convex Sets and Functions on (Normed) Euclidean Spaces . . . 787
6.3.1 Topological Properties of Convex Sets and Functions . 787
6.3.2 Relative interior of a set 788
6.3.3 Openness and compactness are preserved by convex hull operation 802
6.3.4 Extremal points of a simplex are some vertices 807
6.3.5 Closest point of a convex set is unique, with a continuous projection 811
6.3.6 The relative frontier of a set 816
6.3.7 More convexity generalities 823
6.3.8 Convex set as intersection of halfspaces 823
6.3.9 Convexity of general and special intervals 824
6.3.10 On *real*, *is_interval*, *convex* and *connected* are all equivalent 826
6.3.11 Another intermediate value theorem formulation 827
6.3.12 A bound within an interval 828
6.3.13 Representation of any interval as a finite convex hull . 830
6.3.14 Bounded convex function on open set is continuous . . 832
6.3.15 Upper bound on a ball implies upper and lower bounds 834

7 Unsorted **837**

7.1 Shrinking towards the interior of a convex set 838
7.2 Some obvious but surprisingly hard simplex lemmas 845
7.3 Relative interior of convex set 853
7.4 Relative frontier of a convex set 862
7.5 Convexity on direct sums 890
7.6 Explicit formulas for interior and relative interior of convex hull 896
7.7 Similar results for closure and (relative or absolute) frontier . . 904
7.8 Coplanarity, and collinearity in terms of affine hull 907
7.9 Basic lemmas about hyperplanes and halfspaces 917
7.10 Use set distance for an easy proof of separation properties . . . 918
7.11 Connectedness of the intersection of a chain 920
7.12 Proper maps, including projections out of compact sets 923
7.13 Closure of conic hulls 924
7.14 Trivial fact: convexity equals connectedness for collinear sets . 928
7.15 Some stepping theorems 937

7.16 General case without assuming closure and getting non-strict separation . . . 940
7.17 Some results on decomposing convex hulls: intersections, simplicial subdivision . . . 945
7.18 Lower-dimensional affine subsets are nowhere dense . . . 957
7.19 Parallel slices, etc . . . 959
7.20 Paracompactness . . . 963
7.21 Closed-graph characterization of continuity . . . 966
7.22 The union of two collinear segments is another segment . . . 968
7.23 Covering an open set by a countable chain of compact sets . . . 973
7.24 Orthogonal complement . . . 975
7.25 A non-injective linear function maps into a hyperplane. . . . 978
7.26 Path-Connectedness . . . 981
7.26.1 Paths and Arcs . . . 981
7.26.2 Invariance theorems . . . 982
7.26.3 Basic lemmas about paths . . . 984
7.26.4 Path Images . . . 988
7.26.5 Simple paths with the endpoints removed . . . 990
7.26.6 The operations on paths . . . 991
7.26.7 Some reversed and "if and only if" versions of joining theorems . . . 993
7.26.8 The joining of paths is associative . . . 996
7.26.9 Subpath . . . 997
7.26.10 There is a subpath to the frontier . . . 1000
7.26.11 Shift Path to Start at Some Given Point . . . 1003
7.26.12 Straight-Line Paths . . . 1006
7.26.13 Segments via convex hulls . . . 1010
7.26.14 Bounding a point away from a path . . . 1012
7.26.15 Path component . . . 1013
7.26.16 Path connectedness of a space . . . 1014
7.26.17 Lemmas about path-connectedness . . . 1020
7.26.18 Path components . . . 1022
7.26.19 Path components . . . 1023
7.26.20 Paths and path-connectedness . . . 1033
7.26.21 Path components . . . 1034
7.26.22 Sphere is path-connected . . . 1036
7.26.23 Every annulus is a connected set . . . 1043
7.26.24 Relations between components and path components . . . 1044
7.26.25 Existence of unbounded components . . . 1047
7.26.26 The *inside* and *outside* of a Set . . . 1048
7.26.27 Lipschitz projections . . . 1057
7.26.28 Condition for an open map's image to contain a ball . . . 1076
7.26.29 Rectangular paths . . . 1081
7.27 Neighbourhood bases and Locally path-connected spaces . . . 1083

7.27.1 Neighbourhood Bases . . . 1083
7.27.2 Locally path-connected spaces . . . 1085
7.27.3 Locally connected spaces . . . 1095
7.27.4 Dimension of a topological space . . . 1104
7.28 Some Uncountable Sets . . . 1109
7.29 Homotopy of Maps . . . 1111
7.29.1 Trivial properties . . . 1114
7.29.2 Homotopy with P is an equivalence relation . . . 1116
7.29.3 Continuity lemmas . . . 1118
7.29.4 Homotopy of paths, maintaining the same endpoints . . . 1123
7.29.5 Group properties for homotopy of paths . . . 1127
7.29.6 Homotopy of loops without requiring preservation of endpoints . . . 1129
7.29.7 Relations between the two variants of homotopy . . . 1130
7.29.8 Homotopy of "nearby" function, paths and loops . . . 1134
7.29.9 Homotopy and subpaths . . . 1136
7.29.10 Simply connected sets . . . 1139
7.29.11 Contractible sets . . . 1142
7.29.12 Starlike sets . . . 1145
7.29.13 The slotted complex plane . . . 1146
7.29.14 Contractible sets . . . 1150
7.29.15 Local versions of topological properties in general . . . 1151
7.29.16 An induction principle for connected sets . . . 1155
7.29.17 Basic properties of local compactness . . . 1157
7.29.18 Sura-Bura's results about compact components of sets 1168
7.29.19 Special cases of local connectedness and path connectedness . . . 1173
7.29.20 Relations between components and path components . 1179
7.29.21 Components, continuity, openin, closedin . . . 1183
7.29.22 Existence of isometry between subspaces of same dimension . . . 1186
7.29.23 Retracts, in a general sense, preserve (co)homotopic triviality) . . . 1190
7.29.24 Homotopy equivalence . . . 1194
7.29.25 Homotopy equivalence of topological spaces. . . . 1194
7.29.26 Contractible spaces . . . 1196
7.29.27 Misc other results . . . 1208
7.29.28 Some simple positive connection theorems . . . 1209
7.29.29 Self-homeomorphisms shuffling points about . . . 1215
7.29.30 Nullhomotopic mappings . . . 1234
7.30 Euclidean space and n-spheres, as subtopologies of n-dimensional space . . . 1239
7.30.1 Euclidean spaces as abstract topologies . . . 1239
7.30.2 n-dimensional spheres . . . 1243

7.31 Various Forms of Topological Spaces 1248
7.31.1 Connected topological spaces 1248
7.31.2 The notion of "separated between" (complement of "connected between)" 1250
7.31.3 Connected components 1254
7.31.4 Monotone maps (in the general topological sense) . . . 1259
7.31.5 Other countability properties 1263
7.31.6 Neigbourhood bases EXTRAS 1268
7.31.7 T_0 spaces and the Kolmogorov quotient 1270
7.31.8 Kolmogorov quotients 1273
7.31.9 Closed diagonals and graphs 1276
7.31.10 KC spaces, those where all compact sets are closed. . . 1279
7.31.11 Technical results about proper maps, perfect maps, etc 1285
7.31.12 Regular spaces 1293
7.31.13 Locally compact spaces 1307
7.31.14 Special characterizations of classes of functions into and out of R 1321
7.31.15 Normal spaces 1325
7.31.16 Hereditary topological properties 1332
7.31.17 Limits in a topological space 1333
7.31.18 Quasi-components 1335
7.31.19 Additional quasicomponent and continuum properties like Boundary Bumping 1350
7.31.20 Compactly generated spaces (k-spaces) 1358
7.32 Abstract Metric Spaces 1370
7.32.1 Metric topology 1372
7.32.2 Bounded sets 1375
7.32.3 Subspace of a metric space 1378
7.32.4 Abstract type of metric spaces 1379
7.32.5 The discrete metric 1382
7.32.6 Metrizable spaces 1383
7.32.7 Limits at a point in a topological space 1388
7.32.8 Normal spaces and metric spaces 1389
7.32.9 Topological limitin in metric spaces 1390
7.32.10 Cauchy sequences and complete metric spaces 1392
7.32.11 Totally bounded subsets of metric spaces 1407
7.32.12 Compactness in metric spaces 1414
7.32.13 Continuous functions on metric spaces 1425
7.32.14 Completely metrizable spaces 1429
7.32.15 Product metric 1433
7.32.16 More sequential characterizations in a metric space . . 1443
7.32.17 Three strong notions of continuity for metric spaces . . 1450
7.32.18 Isometries 1468

7.32.19 "Capped" equivalent bounded metrics and general product metrics . . . 1469
7.33 Infinite sums . . . 1481
7.33.1 Definition and syntax . . . 1482
7.33.2 General properties . . . 1483
7.33.3 Absolute convergence . . . 1524
7.33.4 Extended reals and nats . . . 1528
7.33.5 Real numbers . . . 1531
7.33.6 Complex numbers . . . 1532
7.33.7 Infinite sums of formal power series . . . 1563
7.34 Ordered Euclidean Space . . . 1564
7.35 Arcwise-Connected Sets . . . 1571
7.35.1 The Brouwer reduction theorem . . . 1572
7.35.2 Arcwise Connections . . . 1574
7.35.3 Density of points with dyadic rational coordinates . . . 1574
7.35.4 Accessibility of frontier points . . . 1622
7.36 Metrics on product spaces . . . 1626
7.37 The Urysohn lemma, its consequences and other advanced material about metric spaces . . . 1635
7.37.1 Urysohn lemma and Tietze's theorem . . . 1635
7.37.2 Urysohn's metrisation theorem . . . 1650
7.37.3 Random metric space stuff . . . 1654
7.37.4 Hereditarily normal spaces . . . 1655
7.37.5 Completely regular spaces . . . 1659
7.37.6 More generally, the k-ification functor . . . 1668
7.37.7 One-point compactifications and the Alexandroff extension construction . . . 1672
7.37.8 Extending continuous maps "pointwise" in a regular space 1691
7.37.9 Extending Cauchy continuous functions to the closure . 1694
7.37.10 Metric space of bounded functions . . . 1705
7.37.11 Metric space of continuous bounded functions . . . 1712
7.37.12 Existence of completion for any metric space M as a subspace of M=>R . . . 1715
7.37.13 Contractions . . . 1718
7.37.14 The Baire Category Theorem . . . 1721
7.37.15 Sierpinski-Hausdorff type results about countable closed unions . . . 1728
7.37.16 The Tychonoff embedding . . . 1731
7.37.17 Urysohn and Tietze analogs for completely regular spaces 1733
7.37.18 Size bounds on connected or path-connected spaces . . 1738
7.37.19 Lavrentiev extension etc . . . 1743
7.37.20 Embedding in products and hence more about completely metrizable spaces . . . 1750
7.37.21 Theorems from Kuratowski . . . 1758

7.37.22 A perfect set in common cases must have at least the cardinality of the continuum . . . 1766
7.37.23 A set of points sparse in another set . . . 1776
7.37.24 Co-sparseness filter . . . 1780
7.37.25 Isolate and discrete . . . 1783
7.38 Operator Norm . . . 1790
7.39 Limits on the Extended Real Number Line . . . 1795
7.39.1 Extended-Real.thy . . . 1801
7.39.2 Extended-Nonnegative-Real.thy . . . 1815
7.39.3 monoset . . . 1815
7.39.4 Relate extended reals and the indicator function . . . 1833
7.40 Radius of Convergence and Summation Tests . . . 1834
7.40.1 Convergence tests for infinite sums . . . 1834
7.40.2 Radius of convergence . . . 1844
7.41 Uniform Limit and Uniform Convergence . . . 1854
7.41.1 Definition . . . 1855
7.41.2 Exchange limits . . . 1857
7.41.3 Uniform limit theorem . . . 1858
7.41.4 Comparison Test . . . 1864
7.41.5 Weierstrass M-Test . . . 1866
7.41.6 Structural introduction rules . . . 1870
7.41.7 Power series and uniform convergence . . . 1876
7.41.8 Tannery's Theorem . . . 1877
7.42 Bounded Linear Function . . . 1879
7.42.1 Intro rules for *bounded_linear* . . . 1880
7.42.2 declaration of derivative/continuous/tendsto introduction rules for bounded linear functions . . . 1880
7.42.3 Type of bounded linear functions . . . 1881
7.42.4 Type class instantiations . . . 1882
7.42.5 On Euclidean Space . . . 1886
7.42.6 concrete bounded linear functions . . . 1891
7.42.7 The strong operator topology on continuous linear operators . . . 1895
7.43 Derivative . . . 1897
7.43.1 Derivatives . . . 1897
7.43.2 Derivative with composed bilinear function . . . 1897
7.43.3 Differentiability . . . 1899
7.43.4 Frechet derivative and Jacobian matrix . . . 1901
7.43.5 Differentiability implies continuity . . . 1902
7.43.6 The chain rule . . . 1903
7.43.7 Composition rules stated just for differentiability . . . 1904
7.43.8 Uniqueness of derivative . . . 1904
7.43.9 Derivatives of local minima and maxima are zero . . . 1909
7.43.10 One-dimensional mean value theorem . . . 1911

7.43.11 More general bound theorems . . . 1912
7.43.12 Differentiability of inverse function (most basic form) . 1921
7.43.13 Uniformly convergent sequence of derivatives . . . 1926
7.43.14 Differentiation of a series . . . 1933
7.43.15 Derivative as a vector . . . 1935
7.43.16 Field differentiability . . . 1942
7.43.17 Field derivative . . . 1947
7.43.18 Derivative Transferring . . . 1956
7.43.19 Relation between convexity and derivative . . . 1956
7.43.20 Partial derivatives . . . 1958
7.43.21 Clairaut's theorem (Symmetry of mixed partials) . . . 1962
7.43.22 Differentiable case distinction . . . 1964
7.43.23 The Inverse Function Theorem . . . 1965
7.43.24 Piecewise differentiable functions . . . 1973
7.43.25 The concept of continuously differentiable . . . 1976
7.44 Finite Cartesian Products of Euclidean Spaces . . . 1984
7.44.1 Closures and interiors of halfspaces . . . 1985
7.44.2 Bounds on components etc. relative to operator norm . 1986
7.44.3 Convex Euclidean Space . . . 1993
7.44.4 Arbitrarily good rational approximations . . . 1993
7.44.5 Derivative . . . 1994
7.44.6 Hessian chain rule . . . 1994
7.44.7 Jacobian . . . 1995
7.44.8 Gradient chain rule . . . 1997
7.44.9 Routine results connecting the types (*real*, *1*) *vec* and *real* . . . 1998
7.45 Complex Analysis Basics . . . 1999
7.45.1 General lemmas . . . 1999
7.45.2 Holomorphic functions . . . 2002
7.45.3 Holomorphic implies real-C^∞ . . . 2007
7.45.4 Analyticity on a set . . . 2008
7.45.5 Analyticity at a point . . . 2014
7.45.6 Combining theorems for derivative with "analytic at" hypotheses . . . 2015
7.45.7 Complex differentiation of sequences and series . . . 2016
7.45.8 Taylor on Complex Numbers . . . 2017
7.46 Complex Transcendental Functions . . . 2021
7.46.1 Möbius transformations . . . 2021
7.46.2 The Exponential Function . . . 2022
7.46.3 Euler and de Moivre formulas . . . 2024
7.46.4 Relationships between real and complex trigonometric and hyperbolic functions . . . 2025
7.46.5 More on the Polar Representation of Complex Numbers 2026
7.46.6 Taylor series for complex exponential, sine and cosine . 2036

7.46.7 The argument of a complex number (HOL Light version) 2039
7.46.8 Analytic properties of tangent function 2045
7.46.9 The principal branch of the Complex logarithm 2045
7.46.10 Relation to Real Logarithm 2046
7.46.11 Derivative of Ln away from the branch cut 2047
7.46.12 Quadrant-type results for Ln 2053
7.46.13 More Properties of Ln 2055
7.46.14 Uniform convergence and products 2059
7.46.15 The Argument of a Complex Number 2064
7.46.16 The Unwinding Number and the Ln product Formula . 2069
7.46.17 Characterisation of Im (Ln z) (Wenda Li) 2071
7.46.18 Relation between Ln and Arg2pi, and hence continuity of Arg2pi 2072
7.46.19 Complex Powers 2074
7.46.20 Some Limits involving Logarithms 2083
7.46.21 Relation between Square Root and exp/ln, hence its derivative 2087
7.46.22 Complex arctangent 2090
7.46.23 Real arctangent 2096
7.46.24 Bounds on pi using real arctangent 2099
7.46.25 Inverse Sine 2099
7.46.26 Inverse Cosine 2103
7.46.27 Upper and Lower Bounds for Inverse Sine and Cosine . 2106
7.46.28 Interrelations between Arcsin and Arccos 2107
7.46.29 Relationship with Arcsin on the Real Numbers 2108
7.46.30 Relationship with Arccos on the Real Numbers 2108
7.46.31 Continuity results for arcsin and arccos 2109
7.46.32 Roots of unity 2110
7.46.33 Normalisation of angles 2112
7.46.34 Convexity of circular sectors in the complex plane . . . 2113
7.46.35 Complex cones 2119

8 Measure and Integration Theory 2127

8.1 Sigma Algebra 2127
8.1.1 Families of sets 2127
8.1.2 Measure type 2156
8.1.3 The smallest σ-algebra regarding a function 2169
8.2 Measurability Prover 2175
8.2.1 Measurability for (co)inductive predicates 2183
8.3 Measure Spaces 2189
8.3.1 Relate extended reals and the indicator function 2189
8.3.2 Extend binary sets 2190
8.3.3 Properties of a premeasure μ 2191

8.3.4 Properties of *emeasure* . . . 2198
8.3.5 μ-null sets . . . 2208
8.3.6 The almost everywhere filter (i.e. quantifier) . . . 2211
8.3.7 σ-finite Measures . . . 2217
8.3.8 Measure space induced by distribution of $(\rightarrow_M)$-functions 2219
8.3.9 Real measure values . . . 2222
8.3.10 Set of measurable sets with finite measure . . . 2226
8.3.11 Measurable sets formed by unions and intersections . . . 2227
8.3.12 Measure spaces with *emeasure M* (*space M*) $< \infty$ . . . 2234
8.3.13 Counting space . . . 2239
8.3.14 Measure restricted to space . . . 2242
8.3.15 Null measure . . . 2246
8.3.16 Scaling a measure . . . 2246
8.3.17 Complete lattice structure on measures . . . 2247
8.4 Borel Space . . . 2272
8.4.1 Generic Borel spaces . . . 2275
8.4.2 Borel spaces on order topologies . . . 2283
8.4.3 Borel spaces on topological monoids . . . 2290
8.4.4 Borel spaces on Euclidean spaces . . . 2290
8.4.5 Borel measurable operators . . . 2297
8.4.6 Borel space on the extended reals . . . 2302
8.4.7 Borel space on the extended non-negative reals . . . 2305
8.4.8 LIMSEQ is borel measurable . . . 2307
8.5 Lebesgue Integration for Nonnegative Functions . . . 2316
8.5.1 Approximating functions . . . 2316
8.5.2 Simple function . . . 2318
8.5.3 Simple integral . . . 2329
8.5.4 Integral on nonnegative functions . . . 2334
8.5.5 Integral under concrete measures . . . 2355
8.6 Binary Product Measure . . . 2375
8.6.1 Binary products . . . 2375
8.6.2 Binary products of σ-finite emeasure spaces . . . 2383
8.6.3 Fubinis theorem . . . 2388
8.6.4 Products on counting spaces, densities and distributions 2390
8.6.5 Product of Borel spaces . . . 2401
8.7 Finite Product Measure . . . 2402
8.7.1 More about Function restricted by *extensional* . . . 2403
8.7.2 Finite product spaces . . . 2405
8.7.3 Measurability . . . 2430
8.8 Caratheodory Extension Theorem . . . 2433
8.8.1 Characterizations of Measures . . . 2434
8.8.2 Caratheodory's theorem . . . 2443
8.8.3 Volumes . . . 2444
8.9 Bochner Integration for Vector-Valued Functions . . . 2453

8.9.1 Restricted measure spaces . . . 2501
8.9.2 Measure spaces with an associated density . . . 2503
8.9.3 Distributions . . . 2504
8.9.4 Lebesgue integration on *count_space* . . . 2506
8.9.5 Point measure . . . 2508
8.9.6 Lebesgue integration on *null_measure* . . . 2508
8.9.7 Legacy lemmas for the real-valued Lebesgue integral . . . 2509
8.9.8 Product measure . . . 2515
8.10 Complete Measures . . . 2526
8.11 Regularity of Measures . . . 2553
8.12 Lebesgue Measure . . . 2562
8.12.1 Measures defined by monotonous functions . . . 2563
8.12.2 Lebesgue-Borel measure . . . 2569
8.12.3 Borel measurability . . . 2572
8.12.4 Measurability of continuous functions . . . 2576
8.12.5 Affine transformation on the Lebesgue-Borel . . . 2582
8.12.6 Lebesgue measurable sets . . . 2590
8.12.7 Lebesgue measurability of ordinate sets . . . 2592
8.12.8 Translation preserves Lebesgue measure . . . 2593
8.12.9 A nice lemma for negligibility proofs . . . 2596
8.12.10 *F_sigma* and *G_delta* sets. . . . 2601
8.13 Tagged Divisions for Henstock-Kurzweil Integration . . . 2604
8.13.1 Some useful lemmas about intervals . . . 2604
8.13.2 Bounds on intervals where they exist . . . 2605
8.13.3 The notion of a gauge — simply an open set containing the point . . . 2607
8.13.4 Attempt a systematic general set of "offset" results for components . . . 2608
8.13.5 Divisions . . . 2608
8.13.6 Tagged (partial) divisions . . . 2621
8.13.7 Functions closed on boxes: morphisms from boxes to monoids . . . 2627
8.13.8 Special case of additivity we need for the FTC . . . 2637
8.13.9 Fine-ness of a partition w.r.t. a gauge . . . 2638
8.13.10 Some basic combining lemmas . . . 2638
8.13.11 The set we're concerned with must be closed . . . 2639
8.13.12 General bisection principle for intervals; might be useful elsewhere . . . 2639
8.13.13 Cousin's lemma . . . 2644
8.13.14 A technical lemma about "refinement" of division . . . 2645
8.13.15 Division filter . . . 2653
8.14 Henstock-Kurzweil Gauge Integration in Many Dimensions . . . 2654
8.14.1 Content (length, area, volume, etc.) of an interval . . . 2654
8.14.2 Gauge integral . . . 2660

8.14.3 Basic theorems about integrals 2661
8.14.4 Cauchy-type criterion for integrability 2676
8.14.5 Additivity of integral on abutting intervals 2678
8.14.6 A sort of converse, integrability on subintervals 2683
8.14.7 Bounds on the norm of Riemann sums and the integral itself 2688
8.14.8 Similar theorems about relationship among components 2689
8.14.9 Uniform limit of integrable functions is integrable . . . 2693
8.14.10 Negligible sets 2696
8.14.11 Some other trivialities about negligible sets 2704
8.14.12 Finite case of the spike theorem is quite commonly needed 2706
8.14.13 In particular, the boundary of an interval is negligible . 2707
8.14.14 Integrability of continuous functions 2708
8.14.15 Specialization of additivity to one dimension 2710
8.14.16 A useful lemma allowing us to factor out the content size 2710
8.14.17 Fundamental theorem of calculus 2711
8.14.18 Taylor series expansion 2716
8.14.19 Only need trivial subintervals if the interval itself is trivial 2718
8.14.20 Integrability on subintervals 2720
8.14.21 Combining adjacent intervals in 1 dimension 2721
8.14.22 Reduce integrability to "local" integrability 2722
8.14.23 Second FTC or existence of antiderivative 2723
8.14.24 Combined fundamental theorem of calculus 2725
8.14.25 General "twiddling" for interval-to-interval function image 2726
8.14.26 Special case of a basic affine transformation 2728
8.14.27 Special case of stretching coordinate axes separately . . 2733
8.14.28 even more special cases 2737
8.14.29 Stronger form of FCT; quite a tedious proof 2738
8.14.30 Integrating characteristic function of an interval 2752
8.14.31 Integrals on set differences 2758
8.14.32 More lemmas that are useful later 2761
8.14.33 Continuity of the integral (for a 1-dimensional interval) 2763
8.14.34 A straddling criterion for integrability 2767
8.14.35 Adding integrals over several sets 2771
8.14.36 Also tagged divisions 2774
8.14.37 Henstock's lemma 2775
8.14.38 Monotone convergence (bounded interval first) 2780
8.14.39 differentiation under the integral sign 2794
8.14.40 Exchange uniform limit and integral 2798
8.14.41 Compute a double integral using iterated integrals and switching the order of integration 2800
8.14.42 Definite integrals for exponential and power function . 2807
8.14.43 Adaption to ordered Euclidean spaces and the Cartesian Euclidean space 2812

9 Kronecker's Theorem with Applications 2815

9.1 Dirichlet's Approximation Theorem 2815
9.2 Kronecker's Approximation Theorem: the One-dimensional Case 2821
9.3 Extension of Kronecker's Theorem to Simultaneous Approximation 2825
9.3.1 Towards Lemma 1 2825
9.3.2 Towards Lemma 2 2828
9.3.3 Towards lemma 3 2831
9.3.4 And finally Kroncker's theorem itself 2837
9.4 Bernstein-Weierstrass and Stone-Weierstrass 2845
9.4.1 Bernstein polynomials 2845
9.4.2 Explicit Bernstein version of the 1D Weierstrass approximation theorem 2847
9.4.3 General Stone-Weierstrass theorem 2849
9.4.4 Polynomial functions 2862
9.4.5 Stone-Weierstrass theorem for polynomial functions . . 2867
9.4.6 Polynomial functions as paths 2871
9.5 Higher-Order Derivatives and C^k Functions on the Real Line . 2877
9.5.1 Higher-Order Derivatives and $C^k(U)$ Smoothness . . . 2877
9.6 Auxiliary Facts 2877
9.6.1 Combinatorics 2877
9.7 Higher-Order Differentiability 2880
9.7.1 Definitions 2880
9.7.2 Basic Facts 2881
9.7.3 Continuity corollaries 2882
9.7.4 Set-wise Higher-Order Derivatives 2883
9.7.5 Linearity of Higher Differentiability 2885
9.7.6 Derivative Formulas for Shifted Monomials 2899
9.7.7 Relationship between Differentiability at a Point and $C^k(U)$ 2901
9.7.8 Closure of C^k 2904
9.8 Taylor's Theorem with Peano Remainder 2918
9.8.1 Real Polynomial Functions: Closure under Differentiation 2918
9.8.2 Taylor Polynomials and Peano Remainders 2918
9.8.3 Derivatives of the Taylor Polynomial and Peano Remainder 2922
9.8.4 Taylor's Theorem with Peano Remainder 2923
9.9 Higher-Order Differentiability in Several Variables 2936
9.9.1 Multi-dimensional k-times Fréchet differentiability at a point 2936
9.9.2 Set-wise k-times Fréchet differentiability 2938
9.9.3 C^k at a point (with continuity) 2938
9.9.4 C^k on an open set 2939

9.9.5 Relationships between the three notions 2939
9.9.6 Basic properties of C^k at a point and on an open set . 2939
9.9.7 Bridge to the one-dimensional theory 2943
9.9.8 Basic closure properties 2948
9.9.9 Gradient for $real^n \Rightarrow real$ 2964
9.9.10 Hessian for $real^n \Rightarrow real$ 2965
9.9.11 Connecting C^k to the Hessian 2966
9.9.12 Basic algebra of gradients 2985
9.9.13 Constants and affine maps 2986
9.9.14 Hessian: constants and affine maps 2986
9.9.15 Coordinate formulas 2987
9.9.16 Hessian algebra at the predicate level 2987
9.9.17 Linearity of the Hessian on C^2 maps 2988
9.9.18 Outer product of vectors 2993
9.9.19 Gradient product rule 2994
9.9.20 Hessian product rule 2994
9.9.21 Component closure 2997
9.9.22 Affine composition (special case) 3002
9.9.23 Summary of the hierarchy 3003
9.10 The C^1 inverse and implicit function theorems 3003
9.11 From C^1 to the inverse-function-theorem interface 3004
9.11.1 The C^1 local inverse 3007
9.11.2 The C^1 implicit function theorem 3008
9.11.3 Further C^k closure properties 3011
9.11.4 Cramer: a linear system with C^k data has a C^k solution 3012
9.11.5 The C^k implicit function theorem 3013
9.12 Real-Analytic (C^ω) Functions in Several Variables 3018
9.12.1 C^∞ smoothness (infinitely many continuous derivatives) 3020
9.12.2 One-dimensional real analyticity via the Peano/Taylor expansion 3020
9.12.3 Multivariate real analyticity (local convergent power series) 3021
9.12.4 Multivariate power-series differentiation 3027
9.12.5 Per-term Fréchet derivative 3027
9.12.6 One-dimensional power-series infrastructure 3029
9.12.7 Coefficient bound 3031
9.12.8 Directional-derivative monomial norm bound 3032
9.12.9 A degree-weighted geometric majorant is summable on *ra_idx* 3035
9.12.10 *ra_idx* is countably infinite 3037
9.12.11 Per-coordinate monomial / derivative bounds 3038
9.12.12 Multivariate geometric majorant (single ratio) 3041
9.12.13 Per-coordinate coefficient bound 3043

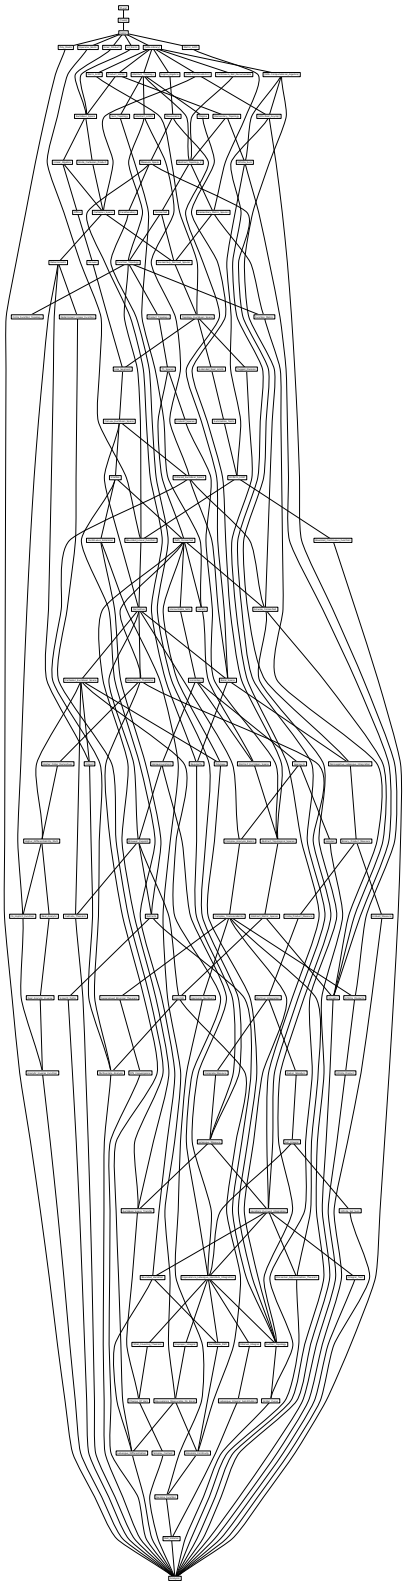
9.12.14 Uniform majorant for the differentiated series near an interior point . . . 3044
9.12.15 Term-by-term differentiation . . . 3050
9.12.16 Incrementing a multi-index stays in the index set . . . 3054
9.12.17 Decrement is the inverse of *ra_inc* on the support slice 3054
9.12.18 Splitting a monomial off one basis direction . . . 3054
9.12.19 The per-basis LHS and RHS pieces . . . 3055
9.12.20 Per-basis reindexing of has-sum . . . 3056
9.12.21 The reindexing identity . . . 3058
9.12.22 Analytic implies infinitely differentiable . . . 3065
9.12.23 Closure properties . . . 3066
9.12.24 Nowhere-dense zeros in one dimension . . . 3074
9.12.25 Convergent power series in one variable . . . 3079
9.12.26 Degree of a multi-index and the monomial scaling identity 3082
9.12.27 Real-analytic functions are continuous . . . 3084
9.12.28 The affine slice of a real-analytic function is real-analytic (at a point) . . . 3088
9.12.29 Propagating a zero of an analytic function along a segment 3090
9.12.30 Nowhere-dense zeros in several variables . . . 3093
9.12.31 Explicit multi-index operations . . . 3097
9.12.32 Quantitative series-on-a-ball representation . . . 3103
9.12.33 Majorant norm: submultiplicative under the Cauchy product . . . 3107
9.12.34 Step (a): power lift of a majorant bound . . . 3114
9.12.35 Step (b): coefficient bound gives a majorant bound . . 3114
9.12.36 Majle helpers: domination, scaling, triangle . . . 3115
9.12.37 Combined series and majorant bookkeeping . . . 3120
9.12.38 Step (c): composition . . . 3124
9.12.39 Step (c): dominated Fubini sum of series families . . . 3130
9.12.40 Final composition theorem . . . 3140
9.12.41 Closure under linear maps, pairing, and finite sums . . 3148
9.12.42 Locality of real-analyticity . . . 3153
9.13 A C^∞ Function That Is Not Analytic . . . 3154
9.13.1 Derivatives of the flat function . . . 3154
9.13.2 Smooth but not analytic . . . 3158
9.14 The formal-series local inverse of a real-analytic map (majorant method) . . . 3159
9.14.1 A fixed enumeration of the Euclidean basis . . . 3159
9.14.2 Unit multi-indices and the concrete identity coefficient family . . . 3159
9.14.3 Cauchy-product support helpers . . . 3162
9.14.4 Valuation (vanishing below a degree) under Cauchy products . . . 3165
9.14.5 Degree locality of Cauchy products and powers . . . 3166

9.14.6 Canonical monomial-composition coefficients along the basis list . . . 3168
9.14.7 Convolution algebra on scalar degree sequences . . . 3174
9.14.8 Per-degree ℓ^1 profiles of coefficient families . . . 3179
9.14.9 The composition operator *ra_inverse_step* and the formal fixed point . . . 3186
9.14.10 The majorant bootstrap for the fixed point . . . 3194
9.15 The real-analytic inverse function theorem . . . 3228
9.15.1 The C^1 inverse function theorem, with derivative data 3228
9.15.2 Derivatives of real-analytic maps . . . 3229
9.15.3 Upgrading the C^1 local inverse to real-analytic . . . 3230
9.15.4 The real-analytic local inverse theorem . . . 3236
9.16 The real-analytic implicit function theorem . . . 3241
9.17 Set variation . . . 3245
9.18 Bounded variation for functions . . . 3245
9.18.1 Closure and subset properties . . . 3246
9.18.2 Other fundamental properties . . . 3249
9.18.3 Composition and monotonicity . . . 3270
9.18.4 Bounded variation implies bounded . . . 3278
9.18.5 Increasing/decreasing functions . . . 3279
9.18.6 Darboux decomposition . . . 3282
9.18.7 One-sided limits of monotone and BV functions . . . 3285
9.18.8 Continuity of vector variation . . . 3289
9.19 Radon-Nikodým Derivative . . . 3304
9.19.1 Absolutely continuous . . . 3307
9.19.2 Existence of the Radon-Nikodym derivative . . . 3308
9.19.3 Uniqueness of densities . . . 3318
9.19.4 Radon-Nikodym derivative . . . 3324

10 Integrals over a Set **3331**

10.1 Notation . . . 3331
10.2 Basic properties . . . 3331
10.3 Complex integrals . . . 3343
10.4 NN Set Integrals . . . 3344
10.5 Scheffé's lemma . . . 3349
10.6 Convergence of integrals over an interval . . . 3353
10.7 Integrable Simple Functions . . . 3357
10.7.1 Totally Ordered Banach Spaces . . . 3367
10.7.2 Auxiliary Lemmas for Set Integrals . . . 3369
10.7.3 Integrability and Measurability of the Diameter . . . 3370
10.7.4 Averaging Theorem . . . 3372
10.8 Homeomorphism Theorems . . . 3377

10.8.1 Homeomorphism of all convex compact sets with nonempty interior . . . 3378
10.8.2 Homeomorphisms between punctured spheres and affine sets . . . 3388
10.8.3 Locally compact sets in an open set . . . 3394
10.8.4 Covering spaces and lifting results for them . . . 3399
10.8.5 Lifting of general functions to covering space . . . 3415
10.8.6 Homeomorphisms of arc images . . . 3426
10.8.7 Equivalence Lebesgue integral on *lborel* and HK-integral 3436
10.8.8 Absolute integrability (this is the same as Lebesgue integrability) . . . 3448
10.8.9 Applications to Negligibility . . . 3457
10.8.10 Negligibility of image under non-injective linear map . 3464
10.8.11 Negligibility of a Lipschitz image of a negligible set . . 3466
10.8.12 Measurability of countable unions and intersections of various kinds. . . . 3474
10.8.13 Negligibility is a local property . . . 3478
10.8.14 Integral bounds . . . 3478
10.8.15 Outer and inner approximation of measurable sets by well-behaved sets. . . . 3490
10.8.16 Transformation of measure by linear maps . . . 3494
10.8.17 Lemmas about absolute integrability . . . 3501
10.8.18 Componentwise . . . 3503
10.8.19 Dominated convergence . . . 3513
10.8.20 Fundamental Theorem of Calculus for the Lebesgue integral . . . 3517
10.8.21 Integration by parts . . . 3520
10.8.22 A non-negative continuous function whose integral is zero must be zero . . . 3522
10.8.23 Various common equivalent forms of function measurability . . . 3525
10.8.24 Lebesgue sets and continuous images . . . 3530
10.8.25 Affine lemmas . . . 3532
10.8.26 More results on integrability . . . 3534
10.8.27 Relation between Borel measurability and integrability. 3537
10.9 Continuity of the indefinite integral; improper integral theorem 3546
10.9.1 Equiintegrability . . . 3546
10.9.2 Subinterval restrictions for equiintegrable families . . . 3555
10.9.3 Continuity of the indefinite integral . . . 3581
10.9.4 Second mean value theorem and corollaries . . . 3589
10.10Continuous Extensions of Functions . . . 3598
10.10.1 Partitions of unity subordinate to locally finite open coverings . . . 3598
10.10.2 Urysohn's Lemma for Euclidean Spaces . . . 3600



10.10.3 Dugundji's Extension Theorem and Tietze Variants . . 3604
10.11Equivalence Between Classical Borel Measurability and HOL Light's 3609
10.11.1 Austin's Lemma 3609
10.11.2 A differentiability-like property of the indefinite integral. 3612
10.11.3 HOL Light measurability 3620
10.11.4 Composing continuous and measurable functions; a few variants 3624
10.11.5 Monotonic functions are Lebesgue integrable 3644
10.11.6 Measurability on generalisations of the binary product 3646
10.12Rectifiable paths and arc-length reparametrization 3653
10.13Basic properties 3666
10.14Invariance under transformations 3667
10.15Shiftpath 3683
10.16Lipschitz and distance bounds 3685
10.17Linepath 3688
10.18Rectifiable path image bound 3689
10.19Brouwer's Fixed Point Theorem 3690
10.19.1 Retractions 3690
10.19.2 Kuhn Simplices 3694
10.19.3 Brouwer's fixed point theorem 3722
10.19.4 Applications 3729
10.20Lipschitz Continuity 3743
10.20.1 Local Lipschitz continuity 3751
10.20.2 Local Lipschitz continuity (uniform for a family of functions) 3753
10.20.3 bilipschitz homeomorphism results 3761
10.21Absolute set-continuity 3772
10.22Absolute continuity for functions 3776
10.22.1 Basic properties 3776
10.22.2 Relationship to bounded variation and continuity . . . 3783
10.22.3 Combining intervals 3794
10.22.4 Bilinear and product 3794
10.22.5 Fundamental theorem of calculus 3797
10.22.6 Integration by parts 3814
10.22.7 Integration by substitution 3815
10.22.8 This doesn't directly involve integration, but that gives an easy proof 3817
10.22.9 Generalize a bit to any convex set 3818
10.22.10Closure and interior 3821
10.23Bounded variation and absolutely integrable derivatives 3828
10.24Lipschitz and distance bounds 3877
10.25Linepath 3881
10.26Rectifiable path image bound 3881

10.27 Absolutely continuous paths . . . 3882
10.28 Harmonic Numbers . . . 3923
10.28.1 The Harmonic numbers . . . 3924
10.28.2 The Euler-Mascheroni constant . . . 3926
10.28.3 Bounds on the Euler-Mascheroni constant . . . 3930
10.29 The Gamma Function . . . 3936
10.29.1 The Euler form and the logarithmic Gamma function . . . 3940
10.29.2 The Polygamma functions . . . 3948
10.29.3 Basic properties . . . 3959
10.29.4 Differentiability . . . 3963
10.29.5 The complex Gamma function . . . 3964
10.29.6 The real Gamma function . . . 3972
10.29.7 The uniqueness of the real Gamma function . . . 3979
10.29.8 The Beta function . . . 3982
10.29.9 Legendre duplication theorem . . . 3983
10.29.10 Limits and residues . . . 3997
10.29.11 Alternative definitions . . . 3998
10.29.12 The Weierstraß product formula for the sine . . . 4015
10.29.13 The Solution to the Basel problem . . . 4017
10.29.14 Approximating a (possibly infinite) interval . . . 4020
10.29.15 Basic properties of integration over an interval . . . 4023
10.29.16 Basic properties of integration over an interval wrt lebesgue measure . . . 4026
10.29.17 General limit approximation arguments . . . 4030
10.29.18 A slightly stronger Fundamental Theorem of Calculus . . . 4032
10.29.19 The substitution theorem . . . 4037
10.29.20 Fubini theorems . . . 4044
10.30 Integration by Substition for the Lebesgue Integral . . . 4055
10.31 The Volume of an n-Dimensional Ball . . . 4065
10.32 Integral Test for Summability . . . 4072
10.33 Embedding Measure Spaces with a Function . . . 4074
10.34 Fashoda Meet Theorem . . . 4083
10.34.1 Bijections between intervals . . . 4083
10.34.2 Fashoda meet theorem . . . 4084
10.34.3 Some slightly ad hoc lemmas I use below . . . 4091
10.34.4 Useful Fashoda corollary pointed out to me by Tom Hales 4093
10.35 Vector Cross Products in 3 Dimensions . . . 4097
10.35.1 Basic lemmas . . . 4097
10.35.2 Preservation by rotation, or other orthogonal transformation up to sign . . . 4100
10.35.3 Continuity . . . 4101
10.36 Bounded Continuous Functions . . . 4102
10.36.1 Definition . . . 4102
10.36.2 Complete Space . . . 4105

10.36.3 Supremum norm for a normed vector space 4106
10.36.4 (bounded) continuous extenstion 4108
10.37Infinite Products 4108
10.37.1 Preliminaries 4108
10.37.2 Definitions and basic properties 4109
10.37.3 Absolutely convergent products 4114
10.37.4 Ignoring initial segments 4120
10.37.5 More elementary properties 4121
10.37.6 Infinite products on ordered topological monoids 4132
10.37.7 Infinite products on topological spaces 4136
10.37.8 Infinite summability on real normed fields 4138
10.37.9 Exponentials and logarithms 4144
10.37.10Embeddings from the reals into some complete real normed field 4152
10.37.11Convergence criteria: especially uniform convergence of infinite products 4153
10.38Unordered infinite products 4163
10.38.1 General properties 4164
10.38.2 Subsets 4180
10.38.3 Strong multipliability 4208
10.38.4 Absolute convergence 4210
10.38.5 Real numbers 4241
10.38.6 Complex numbers 4242
10.39Sums over Infinite Sets 4250
10.40Faces, Extreme Points, Polytopes, Polyhedra etc 4280
10.40.1 Faces of a (usually convex) set 4281
10.40.2 Exposed faces 4295
10.40.3 Extreme points of a set: its singleton faces 4299
10.40.4 Facets 4302
10.40.5 Edges: faces of affine dimension 1 4303
10.40.6 Existence of extreme points 4303
10.40.7 Krein-Milman, the weaker form 4304
10.40.8 Applying it to convex hulls of explicitly indicated finite sets 4306
10.40.9 Polytopes 4314
10.40.10Polyhedra 4316
10.40.11Canonical polyhedron representation making facial structure explicit 4318
10.40.12More general corollaries from the explicit representation 4329
10.40.13Relation between polytopes and polyhedra 4336
10.40.14Relative and absolute frontier of a polytope 4338
10.40.15Special case of a triangle 4339
10.40.16Subdividing a cell complex 4340
10.40.17Simplexes 4344

10.40.18Simplicial complexes and triangulations 4347
10.40.19Refining a cell complex to a simplicial complex 4347
10.40.20Some results on cell division with full-dimensional cells only 4362
10.41Finitely generated cone is polyhedral, and hence closed 4364
10.42Absolute Retracts, Absolute Neighbourhood Retracts and Euclidean Neighbourhood Retracts 4367
10.42.1 Analogous properties of ENRs 4375
10.42.2 More advanced properties of ANRs and ENRs 4395
10.42.3 Original ANR material, now for ENRs 4400
10.42.4 Finally, spheres are ANRs and ENRs 4402
10.42.5 Spheres are connected, etc 4403
10.42.6 Borsuk homotopy extension theorem 4404
10.42.7 More extension theorems 4411
10.42.8 The complement of a set and path-connectedness . . . 4420
10.43Extending Continous Maps, Invariance of Domain, etc 4422
10.43.1 A map from a sphere to a higher dimensional sphere is nullhomotopic 4422
10.43.2 Some technical lemmas about extending maps from cell complexes 4430
10.43.3 Special cases and corollaries involving spheres 4443
10.43.4 Extending maps to spheres 4446
10.43.5 Invariance of domain and corollaries 4463
10.43.6 Formulation of loop homotopy in terms of maps out of type complex 4481
10.43.7 Homeomorphism of simple closed curves to circles . . . 4485
10.43.8 Dimension-based conditions for various homeomorphisms 4487
10.43.9 more invariance of domain 4488
10.43.10The power, squaring and exponential functions as covering maps 4495
10.43.11Hence the Borsukian results about mappings into circles 4502
10.43.12Upper and lower hemicontinuous functions 4506
10.43.13Complex logs exist on various "well-behaved" sets . . . 4510
10.43.14Another simple case where sphere maps are nullhomotopic 4511
10.43.15Holomorphic logarithms and square roots 4513
10.43.16The "Borsukian" property of sets 4517
10.43.17Unicoherence (closed) 4529
10.43.18Several common variants of unicoherence 4535
10.43.19Some separation results 4536
10.44The Jordan Curve Theorem and Applications 4543
10.44.1 Janiszewski's theorem 4543
10.44.2 The Jordan Curve theorem 4547
10.45Polynomial Functions: Extremal Behaviour and Root Counts . 4561

10.45.1 Basics about polynomial functions: extremal behaviour and root counts 4561
10.46 Generalised Binomial Theorem 4566

10.51 Convergence of Formal Power Series 4717
10.51.1 Balls with extended real radius 4717
10.51.2 Basic properties of convergent power series 4718
10.51.3 Lower bounds on radius of convergence 4721
10.51.4 Evaluating power series 4726
10.51.5 FPS of a polynomial 4729
10.51.6 Power series expansions of analytic functions 4730
10.52 Smooth paths 4741
10.52.1 Homeomorphisms of arc images 4741
10.52.2 Piecewise differentiability of paths 4742
10.52.3 Valid paths, and their start and finish 4747
10.53 Poly Mappings as a Real Normed Vector 4755

Chapter 1

Linear Algebra

theory *L2_Norm*
imports *Complex_Main*
begin

1.1 L2 Norm

definition *L2_set* :: $('a \Rightarrow real) \Rightarrow 'a\ set \Rightarrow real$ **where**
$L2_set\ f\ A = sqrt\ (\sum i{\in}A.\ (f\ i)^2)$

lemma *L2_set_cong*:
$[\![A = B;\ \bigwedge x.\ x \in B \Longrightarrow f\ x = g\ x]\!] \Longrightarrow L2_set\ f\ A = L2_set\ g\ B$
unfolding *L2_set_def* **by** *simp*

lemma *L2_set_cong_simp*:
$[\![A = B;\ \bigwedge x.\ x \in B =simp=> f\ x = g\ x]\!] \Longrightarrow L2_set\ f\ A = L2_set\ g\ B$
unfolding *L2_set_def simp_implies_def* **by** *simp*

lemma *L2_set_infinite* [*simp*]: $\neg\ finite\ A \Longrightarrow L2_set\ f\ A = 0$
unfolding *L2_set_def* **by** *simp*

lemma *L2_set_empty* [*simp*]: $L2_set\ f\ \{\} = 0$
unfolding *L2_set_def* **by** *simp*

lemma *L2_set_insert* [*simp*]:
$[\![finite\ F;\ a \notin F]\!] \Longrightarrow$
$L2_set\ f\ (insert\ a\ F) = sqrt\ ((f\ a)^2 + (L2_set\ f\ F)^2)$
unfolding *L2_set_def* **by** (*simp add*: *sum_nonneg*)

lemma *L2_set_nonneg* [*simp*]: $0 \leq L2_set\ f\ A$
unfolding *L2_set_def* **by** (*simp add*: *sum_nonneg*)

lemma *L2_set_0'*: $\forall\ a{\in}A.\ f\ a = 0 \Longrightarrow L2_set\ f\ A = 0$
unfolding *L2_set_def* **by** *simp*

lemma *L2_set_constant*: *L2_set* ($\lambda x.\ y$) *A* = *sqrt* (*of_nat* (*card A*)) * |*y*|
unfolding *L2_set_def* **by** (*simp add*: *real_sqrt_mult*)

lemma *L2_set_mono*:
assumes $\bigwedge i.\ i \in K \Longrightarrow f\ i \leq g\ i$
assumes $\bigwedge i.\ i \in K \Longrightarrow 0 \leq f\ i$
shows *L2_set f K* ≤ *L2_set g K*
unfolding *L2_set_def*
by (*simp add*: *sum_nonneg sum_mono power_mono assms*)

lemma *L2_set_strict_mono*:
assumes *finite K* **and** *K* ≠ {}
assumes $\bigwedge i.\ i \in K \Longrightarrow f\ i < g\ i$
assumes $\bigwedge i.\ i \in K \Longrightarrow 0 \leq f\ i$
shows *L2_set f K* < *L2_set g K*
unfolding *L2_set_def*
by (*simp add*: *sum_strict_mono power_strict_mono assms*)

lemma *L2_set_right_distrib*:
0 ≤ *r* ⟹ *r* * *L2_set f A* = *L2_set* ($\lambda x.\ r * f\ x$) *A*
unfolding *L2_set_def*
by (*simp add*: *power_mult_distrib real_sqrt_mult sum_nonneg flip*: *sum_distrib_left*)

lemma *L2_set_left_distrib*:
0 ≤ *r* ⟹ *L2_set f A* * *r* = *L2_set* ($\lambda x.\ f\ x * r$) *A*
unfolding *L2_set_def power_mult_distrib*
by (*simp add*: *real_sqrt_mult sum_nonneg flip*: *sum_distrib_right*)

lemma *L2_set_eq_0_iff*: *finite A* ⟹ *L2_set f A* = 0 ⟷ ($\forall x{\in}A.\ f\ x = 0$)
unfolding *L2_set_def*
by (*simp add*: *sum_nonneg sum_nonneg_eq_0_iff*)

proposition *L2_set_triangle_ineq*:
L2_set ($\lambda i.\ f\ i + g\ i$) *A* ≤ *L2_set f A* + *L2_set g A*
proof (*cases finite A*)
case *False*
thus *?thesis* **by** *simp*
next
case *True*
thus *?thesis*
proof (*induct set*: *finite*)
case *empty*
show *?case* **by** *simp*

1.13.22 The topology generated by some (open) subsets

In the definition below of a generated topology, the *Empty* case is not necessary, as it follows from *UN* taking for *K* the empty set. However, it is convenient to have, and is never a problem in proofs, so I prefer to write it down explicitly.

We do not require *UNIV* to be an open set, as this will not be the case in applications. (We are thinking of a topology on a subset of *UNIV*, the remaining part of *UNIV* being irrelevant.)

inductive *generate_topology_on* **for** $\mathcal{S}$ **where**
Empty: *generate_topology_on* $\mathcal{S}$ {}
| *Int*: *generate_topology_on* $\mathcal{S}$ *a* ⟹ *generate_topology_on* $\mathcal{S}$ *b* ⟹ *generate_topology_on* $\mathcal{S}$ (*a* ∩ *b*)

| *UN*: $(\bigwedge k.\ k \in K \Longrightarrow \mathit{generate_topology_on}\ \mathcal{S}\ k) \Longrightarrow \mathit{generate_topology_on}\ \mathcal{S}\ (\bigcup K)$
| *Basis*: $s \in \mathcal{S} \Longrightarrow \mathit{generate_topology_on}\ \mathcal{S}\ s$

lemma *istopology_generate_topology_on*:
  istopology (*generate_topology_on* $\mathcal{S}$)
unfolding *istopology_def* **by** (*auto intro*: *generate_topology_on.intros*)

The basic property of the topology generated by a set $\mathcal{S}$ is that it is the smallest topology containing all the elements of $\mathcal{S}$:

1.13.25 Pullback topology

Pulling back a topology by map gives again a topology. *subtopology* is a special case of this notion, pulling back by the identity. We introduce the general notion as we will need it to define the strong operator topology on the space of continuous linear operators, by pulling back the product topology on the space of all functions.

pullback_topology A f T is the pullback of the topology T by the map f on

the set A.

definition *pullback_topology*::('*a set*) ⇒ ('*a* ⇒ '*b*) ⇒ ('*b topology*) ⇒ ('*a topology*)
where *pullback_topology A f T* = *topology* (λ*S*. ∃ *U*. *openin T U* ∧ *S* = *f*−‘*U* ∩ *A*)

2.2.1 Abstract

The following document presents a proof that the Continuum is uncountable. It is formalised in the Isabelle/Isar theorem proving system.

Theorem: The Continuum $\mathbb{R}$ is not denumerable. In other words, there does not exist a function f: $\mathbb{N} \Rightarrow \mathbb{R}$ such that f is surjective.

Outline: An elegant informal proof of this result uses Cantor's Diagonalisation argument. The proof presented here is not this one.

First we formalise some properties of closed intervals, then we prove the Nested Interval Property. This property relies on the completeness of the Real numbers and is the foundation for our argument. Informally it states that an intersection of countable closed intervals (where each successive interval is a subset of the last) is non-empty. We then assume a surjective function f: $\mathbb{N} \Rightarrow \mathbb{R}$ exists and find a real x such that x is not in the range of f by generating a sequence of closed intervals then using the Nested Interval Property.

theorem *real_non_denum*: $\nexists f :: nat \Rightarrow real.\ surj\ f$
proof
  assume $\exists f{::}nat \Rightarrow real.\ surj\ f$
  then obtain $f :: nat \Rightarrow real$ **where** *surj f* **..**

First we construct a sequence of nested intervals, ignoring *range f*.

  have $a < b \Longrightarrow \exists ka\ kb.\ ka < kb \wedge \{ka..kb\} \subseteq \{a..b\} \wedge c \notin \{ka..kb\}$ **for** $a\ b\ c ::$ *real*
    by (*auto simp add*: *not_le cong*: *conj_cong*)
      (*metis dense le_less_linear less_linear less_trans order_refl*)
  then obtain *i j* **where** *ij*:
    $a < b \Longrightarrow i\ a\ b\ c < j\ a\ b\ c$
      $a < b \Longrightarrow \{i\ a\ b\ c\ ..\ j\ a\ b\ c\} \subseteq \{a\ ..\ b\}$
      $a < b \Longrightarrow c \notin \{i\ a\ b\ c\ ..\ j\ a\ b\ c\}$
    for $a\ b\ c ::$ *real*
    by *metis*

  define *ivl* **where** *ivl* =
    rec_nat $(f\ 0 + 1, f\ 0 + 2)$ $(\lambda n\ x.\ (i\ (fst\ x)\ (snd\ x)\ (f\ n), j\ (fst\ x)\ (snd\ x)\ (f\ n)))$
  define *I* **where** $I\ n = \{fst\ (ivl\ n)\ ..\ snd\ (ivl\ n)\}$ **for** *n*

  have *ivl* [*simp*]:
    $ivl\ 0 = (f\ 0 + 1, f\ 0 + 2)$
    $\bigwedge n.\ ivl\ (Suc\ n) = (i\ (fst\ (ivl\ n))\ (snd\ (ivl\ n))\ (f\ n), j\ (fst\ (ivl\ n))\ (snd\ (ivl\ n))\ (f\ n))$
    unfolding *ivl_def* **by** *simp_all*

This is a decreasing sequence of non-empty intervals.

  have *less*: $fst\ (ivl\ n) < snd\ (ivl\ n)$ **for** *n*
    by (*induct n*) (*auto intro*!: *ij*)

  have *decseq I*
    unfolding *I_def decseq_Suc_iff ivl fst_conv snd_conv*

```
    by (intro ij allI less)
```

Now we apply the finite intersection property of compact sets.

```
  have I 0 ∩ (⋂ i. I i) ≠ {}
  proof (rule compact_imp_fip_image)
    fix S :: nat set
    assume fin: finite S
    have {} ⊂ I (Max (insert 0 S))

3.1 Function Topology

We want to define the general product topology.

The product topology on a product of topological spaces is generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. This is the coarsest topology for which the projection to each factor is continuous.

To form a product of objects in Isabelle/HOL, all these objects should be subsets of a common type 'a. The product is then $Pi_E\ I\ X$, the set of elements from $'i$ to $'a$ such that the i-th coordinate belongs to $X\ i$ for all $i \in I$.

Hence, to form a product of topological spaces, all these spaces should be subsets of a common type. This means that type classes can not be used to define such a product if one wants to take the product of different topological spaces (as the type 'a can only be given one structure of topological space using type classes). On the other hand, one can define different topologies

(as introduced in *thy*) on one type, and these topologies do not need to share the same maximal open set. Hence, one can form a product of topologies in this sense, and this works well. The big caveat is that it does not interact well with the main body of topology in Isabelle/HOL defined in terms of type classes... For instance, continuity of maps is not defined in this setting.

As the product of different topological spaces is very important in several areas of mathematics (for instance adeles), I introduce below the product topology in terms of topologies, and reformulate afterwards the consequences in terms of type classes (which are of course very handy for applications).

Given this limitation, it looks to me that it would be very beneficial to revamp the theory of topological spaces in Isabelle/HOL in terms of topologies, and keep the statements involving type classes as consequences of more general statements in terms of topologies (but I am probably too naive here).

Here is an example of a reformulation using topologies. Let

$$\begin{aligned}&\textit{continuous_map}\ T1\ T2\ f = \\ &\quad ((\forall\ U.\ \textit{openin}\ T2\ U \longrightarrow \textit{openin}\ T1\ (f - `U \cap \textit{topspace}(T1))) \\ &\qquad \wedge\ (f `(\textit{topspace}\ T1) \subseteq (\textit{topspace}\ T2)))\end{aligned}$$

be the natural continuity definition of a map from the topology *T1* to the topology *T2*. Then the current *continuous_on* (with type classes) can be redefined as

$$\begin{aligned}&\textit{continuous_on}\ s\ f = \\ &\quad \textit{continuous_map}\ (\textit{top_of_set}\ s)\ (\textit{topology}\ \textit{euclidean})\ f\end{aligned}$$

In fact, I need *continuous_map* to express the continuity of the projection on subfactors for the product topology, in Lemma *continuous_on_restrict_product_topology*, and I show the above equivalence in Lemma *continuous_map_iff_continuous*.

I only develop the basics of the product topology in this theory. The most important missing piece is Tychonov theorem, stating that a product of compact spaces is always compact for the product topology, even when the product is not finite (or even countable).

I realized afterwards that this theory has a lot in common with `~~/src/HOL/Library/Finite_Map.thy`.

3.1.1 The product topology

We can now define the product topology, as generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. Equivalently, it is generated by sets which are one open set along one single coordinate, and the whole space along other coordinates. In fact, this is only equivalent for nonempty products, but for the empty product the first formulation is better (the second one gives an

empty product space, while an empty product should have exactly one point, equal to *undefined* along all coordinates.

So, we use the first formulation, which moreover seems to give rise to more straightforward proofs.

definition *product_topology*::('*i* ⇒ ('*a topology*)) ⇒ ('*i set*) ⇒ (('*i* ⇒ '*a*) *topology*)
where *product_topology T I* =
topology_generated_by {(Π$_E$ *i*∈*I*. *X i*) |*X*. (∀ *i*. *openin* (*T i*) (*X i*)) ∧ *finite* {*i*. *X i* ≠ *topspace* (*T i*)}}

abbreviation *powertop_real* :: '*a set* ⇒ ('*a* ⇒ *real*) *topology*
where *powertop_real* ≡ *product_topology* (λ*i*. *euclideanreal*)

The total set of the product topology is the product of the total sets along each coordinate.
